**Systems, Decision and Control in Energy VII** Vitalii Babak, Artur Zaporozhets, 2025-07-02 This book explores the intricate interplay between burgeoning energy demands and the imperatives of ecological sustainability. The first section, Electric Power Engineering, explores critical innovations in the generation, transmission, and distribution of electric power. As global energy demands rise, the development of efficient and reliable electric power systems becomes essential. This section includes studies on optimizing grid performance, enhancing resilience, and integrating smart grid technologies. Advances in grid automation, energy storage, and demand response are examined, reflecting the shift toward adaptive, efficient, and secure power systems. The second section, Heat Power Engineering, addresses innovations in the generation and distribution of thermal energy. Heat power plays a vital role in industrial processes, residential heating, and energy-intensive applications, particularly in regions with cold climates. Researchers in this section present work on the optimization of heat transfer systems, combined heat and power (CHP) technologies, and efficient thermal energy storage solutions. The third section, Renewable Power Engineering, focuses on the development and integration of sustainable energy sources. Renewable energy technologies, such as wind, solar, hydro, and biomass, have become critical in reducing carbon emissions and achieving energy independence. The contributions in this section highlight advances in renewable energy production, storage, and integration with existing power systems. The final section, Environmental Safety, encompasses research on mitigating the environmental impact of energy production and consumption. With energy systems being one of the primary sources of emissions and pollution, environmental safety has become a central concern in energy research. This section presents studies on emission reduction technologies, pollution control strategies, and sustainable waste management practices within the energy sector. It includes research on air and water quality and sustainable resource utilization, highlighting how environmental safety measures can be incorporated into all stages of energy production and distribution.
