Physiopathology of Cancer: Biology and Biochemistry P. Shubik, 1974-06-24 *Research Advances in Alcohol and Drug Problems* Yedy Israel, Frederick B. Glaser, Harold Kalant, Robert E. Popham, Wolfgang Schmidt, Reginald G. Smart, 2013-11-11

Over the last decade the world has experienced a growing interest in problems associated with the nonmedical use of drugs. This interest has corresponded to a real growth in the extent, diversity and social impact of the use of alcohol and drugs in many societies. As a result the amount of research and writing on the subject of drug problems has greatly increased and it has become very difficult for one individual to keep up with all the relevant literature. There is thus an acute need in the field for critical reviews that assess current developments and the present series is intended to fill this need. The series is not to be an annual review in the usual sense. The aim is not to cover all the work reported during the preceding year in relation to a fixed selection of topics. Rather it is to present each year evaluative papers on topics in which enough recent progress has been made to alter the general scope in a particular area. Owing to the multidisciplinary nature of problems of drug use and dependence the papers published in each volume will be drawn from several disciplines. However some volumes may be devoted to one particular problem with individual reviews and papers examining various aspects of it. The composition of the editorial board and the international advisory board reflects these objectives. The editors are members of the senior scientific staff of the Addiction Research Foundation of Ontario.

National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1971 *Presystemic Drug Elimination* Charles F. George, David G. Shand, 2013-10-22 Butterworths

International Medical Reviews Clinical Pharmacology and Therapeutics 1 *Presystemic Drug Elimination* explores the principles of presystemic drug metabolism in human based on animal studies. This book is divided into four sections encompassing 10 chapters that specifically describe the extent of metabolism occurring in the gastrointestinal tract, liver and lung. Section 1 focuses on presystemic elimination by the gastrointestinal tract. This section discusses the enzymatic biotransformation in the gastrointestinal mucosa and the ability of the microflora to metabolize drugs. Section 2 considers the contribution of the liver to presystemic drug elimination with a particular emphasis on the physiological factors which determine the rate of breakdown of drugs in vivo. This section also deals with the effects of hepatic cirrhosis on presystemic drug elimination. Section 3 presents first a brief outline of the knowledge of pulmonary structure and relevant physiology followed by a discussion on first pass metabolism of endogenous substrates and drugs across the pulmonary circulation and of environmental chemicals after inhalation. This section also provides the methods for distinguishing between the contribution of the various sites to presystemic drug elimination and the problems associated with attempts to analyze available pharmacokinetic data. This work is an ideal source for clinical pharmacologists and researchers.
