Restoring North America's Birds Lessons From Landscape Ecology:

Restoring North America's Birds Robert A. Askins, 2008-10-01 DIV The decline of bird species in a wide range of North American habitats forests prairies shrublands mountain regions marshes and deserts has inspired two decades of intense scientific study of bird ecology and conservation But for professional scientists and amateur birders alike interpreting the results of these diverse studies is often complex and bewildering This accessible book pulls together recent research on bird species and habitats to show how basic ecological principles apply in seemingly different situations Robert A Askins provides an engaging introduction to bird ecology and concepts of landscape ecology focusing on such intriguing species as Bachman's Warbler Red Crossbill Mountain Plover and Marbled Murrelet Understanding the ancient landscapes of North America and how humans have changed them Askins says is essential for devising plans to protect and restore bird populations In addition to such obvious changes to the landscape as the clearing of forests and plowing of prairies more subtle changes also dramatically affect birds Species may disappear when we interrupt natural disturbances by suppressing wildfires or trapping out beaver or when we disrupt habitat with roads and housing developments Askins challenges some of the assumptions that underlie current conservation efforts and offers concrete recommendations based on sound ecological principles for protecting the rich natural diversity of North America's birds div [Saving Migrant Birds](#) John Faaborg, 2014-02-19

Rigorous and well defended Faaborg makes many fresh and in some cases provocative points regarding management guidelines for migrant birds Kenneth Able Great Plains Research In the 1980s numerous scientific surveys documented both declining bird populations especially among Neotropical songbirds that winter in the tropics and the loss of tropical rain forest habitat Drawing the seemingly obvious conclusion scientists and environmental activists linked songbird declines to loss of tropical habitats and alerted the world to an impending ecological catastrophe Their warnings led to the establishment of the Neotropical Migratory Bird Conservation Program also known as Partners in Flight the self proclaimed largest conservation effort in history Looking back over more than a decade of efforts to save migrant birds John Faaborg offers the first serious evaluation of the state of songbird populations today the effectiveness of conservation programs such as Partners in Flight and the reliability and completeness of scientific research on migrant birds Taking neither an alarmist nor a complacent approach he shows that many factors besides habitat loss affect bird populations and that Neotropical migrants as a group are not declining dramatically though some species adapt to habitat alteration more successfully than others Faaborg's state of the art survey thus clarifies the kinds of information we will need and the conservation efforts we should undertake to ensure the long term survival of Neotropical migrant birds Presents a carefully and closely reasoned argument about the magnitude of the conservation problems facing migrant birds how we can reduce these problems and how current conservation efforts have enormous value even if there is no immediate crisis Scott K Robinson Professor and Head Department of Animal Biology University of Illinois **Atlantic City International Airport**, 2003 *Prado Basin*

Paradise Found Steve Nicholls, 2009-08-01 The first Europeans to set foot on North America stood in awe of the natural abundance before them The skies were filled with birds seas and rivers teemed with fish and the forests and grasslands were a hunter s dream with populations of game too abundant and diverse to even fathom It s no wonder these first settlers thought they had discovered a paradise of sorts Fortunately for us they left a legacy of copious records documenting what they saw and these observations make it possible to craft a far more detailed evocation of North America before its settlement than any other place on the planet Here Steve Nicholls brings this spectacular environment back to vivid life demonstrating with both historical narrative and scientific inquiry just what an amazing place North America was and how it looked when the explorers first found it The story of the continent s colonization forms a backdrop to its natural history which Nicholls explores in chapters on the North Atlantic the East Coast the Subtropical Caribbean the West Coast Baja California and the Great Plains Seamlessly blending firsthand accounts from centuries past with the findings of scientists today Nicholls also introduces us to a myriad cast of characters who have chronicled the changing landscape from pre Revolutionary era settlers to researchers whom he has met in the field A director and writer of Emmy Award winning wildlife documentaries for the Smithsonian Channel Animal Planet National Geographic and PBS Nicholls deploys a cinematic flair for capturing nature at its most mesmerizing throughout But *Paradise Found* is much more than a celebration of what once was it is also a reminder of how much we have lost along the way and an urgent call to action so future generations are more responsible stewards of the world around them The result is popular science of the highest order a book as remarkable as the landscape it recreates and as inspired as the men and women who discovered it

This Delta, this Land Mikko Saikku, 2011-03-15 This environmental history of the Yazoo Mississippi Delta places the Delta s economic and cultural history in an environmental context It reveals the human aspects of the region s natural history including land reclamation slave and sharecropper economies ethnic and racial perceptions of land ownership and stewardship and even blues music
