

The Resident's Guide to the LMCC II

3rd Edition

Revised by AMB.

The Licentiate of the Medical Council of Canada Exam, part II, also known as the MCCQE II, was the traditional means of qualifying for a general license to practice medicine in Canada. Now that both the internship year and the general license are no longer available, many residents view the exam as a stressful and expensive exercise in futility. While the process is stressful and expensive, it need not be futile. Preparation for the exam can be an enlightening review. Scenarios tend to repeat over the years, the pass rate is greater than 95% on the first attempt, and there is an option to rewrite, so don't panic.

The exam is an OSCE (Observed Scenario Clinical Exam) in which the candidate progresses through a series of stations. Your starting point is determined alphabetically. At each station there is a physician examiner and either a real person posing as a patient or a telephone over which you must speak to a patient or another physician requesting assistance.

The most recent sessions (since 1997) contain six short cases known as 5-minute complets, in which the candidate is allotted 5 minutes to assess a patient and 5 minutes to write short answers to questions related to the case. There was also a series of six longer cases in which the candidates were presented with a more involved clinical problem, such as a resuscitation or psychosocial counseling session, lasting 10 minutes each. The physician examiner may ask one or two questions in the last minute of a 10-minute station. There is one minute between stations during which you can look at a brief description of the patient and consider your approach. Occasionally "pilot" questions will be included in the exam, which will not count towards the final mark but are used to test new questions. You will not know which questions are "pilot" questions.

The content of the exam is general medicine. This means family practice & emergency medicine. The following topics appear consistently:

Pediatrics – diarrhea, development, neonatal jaundice, asthma

Obs/Gyn – amenorrhea, vaginal blood, abdominal pain, PPH, OCP, elective abortion counseling

Suturing – choice of suture, tetanus vaccine

Chest Pain – read CXR, ECG

Resuscitation – fluid resuscitation after blood loss, ABCDs

Overdose – ASA, TCA

Needle stick – AIDS, hepatitis, vaccinations

Psychiatry – depression, mania, schizophrenia

Neurosurgery – back and neck radiculopathies, carpal tunnel

(Note that every history should include name, age, occupation, past medical history, family history, medications, drugs/alcohol, review of systems)

1997

I. First year university student, 9 weeks pregnant, considering abortion. Take a history and counsel. Findings: tearful, guilty, sleep disturbance, has not engaged social supports.

History: combine a pregnancy history with a social history and a screen for depression.

Pregnancy: Patient ID (name, age, occupation), GTPAL (number of gestations, term pregnancies, premature births, abortions, live children), history of problems, if any, with previous pregnancies. Current pregnancy, establish gestational age (GA) by last menstrual period (LMP) if regular periods and sure dates (if unsure a dating ultrasound would be needed). The GA is the number of weeks from the first day of the LMP. The EDC is first day of LMP + 7 days – 3 months. Ask about use of alcohol, smoking, drugs, domestic violence (50% begins in pregnancy), maternal illnesses during the pregnancy (particularly diabetes, rubella, toxoplasmosis, herpes, CMV, thyroid dysfunction, HTN, hypercoagulation). Use of birth control, if any. Past medical history, family history of pregnancy related problems, medications.

Resident Guide To The Lmcc Ii
