Mobile Source Emissions In Cairo Egypt And Impact Of Control Measures:

Mobile Source Emissions in Cairo Egypt and Impact of Control Measures United States. Environmental Protection Agency. Office of Air and Radiation,1996

Environmental Security and Environmental Management: The Role of Risk Assessment Benoit Morel,Igor Linkov,2007-05-22 The concept of environmental security has emerged as one basis for understanding international conflicts This phrase can mean a variety of things It can signify security issues stemming from environmental concerns or conflicting needs or it can mean that the environment is treated as a resource for the long term and the question is what should be done today to preserve the quality of the environment in the future In the same way that energy security is about ensuring access to energy for the long run it can also mean that pressing environmental concerns create a situation where different countries and communities are forced to collaboratively design a unified response even if cooperation is not generally in the logic of their relations Over the last several years the authors of this book and their colleagues have tried to demonstrate the power of risk assessment and decision analysis as valuable tools that decision makers should use for a broad range of environmental problems including environmental security Risk analysis is almost more a state of mind or a way of looking at problems than it is a kind of algorithm or a set of recipes It projects a kind of rationality on problems and forces a certain degree of quantitative rigor as opposed to the all too common tendency of making environmental recommendations based on anecdotal evidence

Egypt, Energy and the Environment Tarek H. Selim,2009-07-31 Pure environmentalism and pure resource exploitation can be integrated together to form an encompassing sustainability solution This is the main message of this book based on an innovative structure concentration incentives methodology applied to Egypt This methodology provides a basis for achieving environmental sustainability based on endogenous source driven forces of change in contrast to the traditional effects dominant oriented approach Though the book s methodology could be used as a framework of analysis in environmental sustainability research for any developing country Egypt provides a rich case study because of its historical socio economic and political constructs Sustainable development is generally seen as a tradeoff between resource efficiency and social equity such that total resource essentials in society can become sustainable in the long run in a manner that meets the needs of current generations without compromising the ability of future generations to meet their own needs Environmental sustainability cannot be implemented without the direct inclusion of structure form concentration effect and incentives drivers as critical policy choices because 1 they constitute a necessary condition in any country s path towards sustainable development 2 they must be implemented simultaneously as a target and constraint and 3 they require social and political sacrifice complemented by endogenous based systems in contrast to authoritarian solutions

Egypt Energy and the Environment presents research on Egypt s energy and environmental resources from multidisciplinary perspectives It offers sustainability solutions to many of the country s problems relating to energy pollution water gender wildlife politics economics management ecology and information
