Theory Construction and Model-Building Skills James Jaccard,Jacob Jacoby,2020-02-06

This book provides young scientists with tools to assist them in the practical aspects of theory construction We take an informal journey through the cognitive heuristics tricks of the trade and ways of thinking that we have found to be useful in developing theories essentially conceptualizations that can advance knowledge in the social sciences This book is intended to provide the instructor with a useful source for helping students come up with ideas for research and for fine tuning the resultant theories that emerge from such thinking An objective of this book is to move toward a needed balance in the emphases given to theory construction and theory testing

Building Regression Models in Social Science , Group

Model Building Rodney Scott,2018-06-12 This book describes the cognitive and interpersonal effects of group model building and presents empirical research on what group model building achieves and how Further it proposes an integrated causal mechanism for the effects on participants There have been multiple previous attempts at explaining the effects of group model building on participants and this book integrates these various theories for the first time The causal mechanisms described here suggest a variety of design elements that should be included in group model building practice For example practitioners typically try to reduce complexity for clients to make the process feel more accessible In contrast the findings

presented here suggest that the very act of muddling through complexity increases participants affective commitment to the group and the decisions made. The book also describes implications for theory and practice. System dynamics has traditionally been interested in using technical modeling processes to make policy recommendations. Group model building demonstrates that these same techniques also have implications for group decision making as a method for negotiating agreement. The book argues for the value of group model building as a mediating or negotiating tool rather than merely a positivist tool for technical problems.

Research- and Practice-Based Models for Advancing Social Work Ngoh Tiong Tan,
Fundamentals of Social Research Methods Claire Bless, Craig Higson-Smith, 2000 **Modelling and Simulation in the Social Sciences from the Philosophy of Science Point of View** R. Hegselmann, Ulrich Mueller, Klaus G.

Troitzsch, 2013-03-09 Model building in the social sciences can increasingly rely on well elaborated formal theories. At the same time inexpensive large computational capacities are now available. Both make computer based model building and simulation possible in social science whose central aim is in particular an understanding of social dynamics. Such social dynamics refer to public opinion formation, partner choice, strategy decisions in social dilemma situations and much more. In the context of such modelling approaches novel problems in philosophy of science arise which must be analysed. The main aim of this book: Interest in social simulation has recently been growing rapidly world wide mainly as a result of the increasing availability of powerful personal computers. The field has also been greatly influenced by developments in cellular automata theory from mathematics and in distributed artificial intelligence which provided tools readily applicable to social simulation. This book presents a number of modelling and simulation approaches and their relations to problems in philosophy of science. It addresses sociologists and other social scientists interested in formal modelling, mathematical sociology and computer simulation as well as computer scientists interested in social science applications and philosophers of social science.

How to Build Social Science Theories Pamela J. Shoemaker, James William Tankard, Jr., Dominic L. Lasorsa, 2003-12-10 Click Additional Materials to read the foreword by Jerald Hage. As straightforward as its title, *How to Build Social Science Theories* sidesteps the well traveled road of theoretical examination by demonstrating how new theories originate and how they are elaborated. Essential reading for students of social science research, this book traces theories from their most rudimentary building blocks: terminology and definitions through multivariable theoretical statements, models, the role of creativity in theory building and how theories are used and evaluated. Authors Pamela J. Shoemaker, James William Tankard Jr. and Dominic L. Lasorsa intend to improve research in many areas of the social sciences by making research more theory based and theory oriented. The book begins with a discussion of concepts and their theoretical and operational definitions. It then proceeds to theoretical statements including hypotheses, assumptions and propositions. Theoretical statements need theoretical linkages and operational linkages; this discussion begins with bivariate relationships as well as three variable, four variable and further multivariate relationships. The authors also devote chapters to the creative component of theory building and how to evaluate

theories How to Build Social Science Theories is a sophisticated yet readable analysis presented by internationally known experts in social science methodology It is designed primarily as a core text for graduate and advanced undergraduate courses in communication theory It will also be a perfect addition to any course dealing with theory and research methodology across the social sciences Additionally professional researchers will find it an indispensable guide to the genesis dissemination and evaluation of social science theories
