Model Based Inference In The Life Sciences A Primer On Evidence:

Model Based Inference in the Life Sciences David R. Anderson, 2007-12-22 This textbook introduces a science philosophy called information theoretic based on Kullback Leibler information theory It focuses on a science philosophy based on multiple working hypotheses and statistical models to represent them The text is written for people new to the information theoretic approaches to statistical inference whether graduate students post docs or professionals Readers are however expected to have a background in general statistical principles regression analysis and some exposure to likelihood methods This is not an elementary text as it assumes reasonable competence in modeling and parameter estimation

Video Surveillance of Nesting Birds Christine Ann Ribic, 2012-05-13 Until recently inferring identities of predators and monitoring cryptic behaviors at the nest was time consuming often with anecdotal results No more Video nest surveillance so aptly revealed in this volume has ushered in a new era of data collection that allows field workers to link environmental factors with such aspects as the temporal dynamics of predator communities in relation to what the birds are doing at their nests thus removing much of the guesswork of earlier studies

Spencer G Sealy University of Manitoba Video Surveillance of Nesting Birds shatters earlier beliefs about how birds interact with nest predators Much of what we thought we knew about nesting and its hazards was flat out wrong as authors in this book discovered by using modern technology in the field As simple as we would like our models of animal behavior to be this book shows that reality is far more complex and nuanced

Predictive Species and Habitat Modeling in Landscape Ecology C. Ashton Drew, Yolanda F. Wiersma, Falk Huettmann, 2010-11-25 Most projects in Landscape Ecology at some point define a species habitat association These models are inherently spatial dealing with landscapes and their configurations Whether coding behavioral rules for dispersal of simulated organisms through simulated landscapes or designing the sampling extent of field surveys and experiments in real landscapes landscape ecologists must make assumptions about how organisms experience and utilize the landscape These convenient working postulates allow modelers to project the model in time and space yet rarely are they explicitly considered The early years of landscape ecology necessarily focused on the evolution of effective data sources metrics and statistical approaches that could truly capture the spatial and temporal patterns and processes of interest Now that these tools are well

established we reflect on the ecological theories that underpin the assumptions commonly made during species distribution modeling and mapping This is crucial for applying models to questions of global sustainability Due to the inherent use of GIS for much of this kind of research and as several authors research involves the production of multicolored map figures there would be an 8 page color insert Additional color figures could be made available through a digital archive or by cost contributions of the chapter authors Where applicable would be relevant chapters GIS data and model code available through a digital archive The practice of data and code sharing is becoming standard in GIS studies is an inherent method of this book and will serve to add additional research value to the book for both academic and practitioner audiences

Freshwater Ecology and Conservation Jocelyne Hughes, 2018-11-30 This practical manual of freshwater ecology and conservation provides a state of the art review of the approaches and techniques used to measure monitor and conserve freshwater ecosystems It offers a single comprehensive and accessible synthesis of the vast amount of literature for freshwater ecology and conservation that is currently dispersed in manuals toolkits journals handbooks grey literature and websites Successful conservation outcomes are ultimately built on a sound ecological framework in which every species must be assessed and understood at the individual community catchment and landscape level of interaction For example freshwater ecologists need to understand hydrochemical storages and fluxes the physical systems influencing freshwaters at the catchment and landscape scale and the spatial and temporal processes that maintain species assemblages and their dynamics A thorough understanding of all these varied processes and the techniques for studying them is essential for the effective conservation and management of freshwater ecosystems

Selecting the Right Analyses for Your Data W. Paul Vogt, Elaine R. Vogt, Dianne C. Gardner, Lynne M. Haeffele, 2014-04-30 What are the most effective methods to code and analyze data for a particular study This thoughtful and engaging book reviews the selection criteria for coding and analyzing any set of data whether qualitative quantitative mixed or visual The authors systematically explain when to use verbal numerical graphic or combined codes and when to use qualitative quantitative graphic or mixed methods modes of analysis Chapters on each topic are organized so that researchers can read them sequentially or can easily flip and find answers to specific questions Nontechnical discussions of cutting edge approaches illustrated with real world examples emphasize how to choose rather than how to implement the various analyses The book shows how using the right analysis methods leads to more justifiable conclusions and more persuasive presentations of research results User Friendly Features Chapter opening preview boxes that highlight useful topics addressed End of chapter summary tables recapping the dos and don ts and advantages and disadvantages of each analytic technique Annotated suggestions for further reading and technical

resources on each topic See also Vogt et al s When to Use What Research Design which addresses the design and sampling decisions that occur prior to data collection

Statistical Methods for Experimental Research in Education and Psychology Jimmie Leppink, 2019-05-30 This book focuses on experimental research in two disciplines that have a lot of common ground in terms of theory experimental designs used and methods for the analysis of experimental research data education and psychology Although the methods covered in this book are also frequently used in many other disciplines including sociology and medicine the examples in this book come from contemporary research topics in education and psychology Various statistical packages commercial and zero cost Open Source ones are used The goal of this book is neither to cover all possible statistical methods out there nor to focus on a particular statistical software package There are many excellent statistics textbooks on the market that present both basic and advanced concepts at an introductory level and or provide a very detailed overview of options in a particular statistical software programme This is not yet another book in that genre Core theme of this book is a heuristic called the question design analysis bridge there is a bridge connecting research questions and hypotheses experimental design and sampling procedures and common statistical methods in that context Each statistical method is discussed in a concrete context of a set of research question with directed one sided or undirected two sided hypotheses and an experimental setup in line with these questions and hypotheses Therefore the titles of the chapters in this book do not include any names of statistical methods such as analysis of variance or analysis of covariance In a total of seventeen chapters this book covers a wide range of topics of research questions that call for experimental designs and statistical methods fairly basic or more advanced
