Ruggieri,2012-12-06 This book of Proceedings contains papers of the Third European Workshop on Mobile Personal Satcoms EMPS 98 held in Venice Italy November 1998 For the third time EMPS has given to the experts an opportunity for exchanging opinions and novel ideas in the exciting field of mobile and personal satellite communications As with the 1996 edition EMPS 98 issued a formal call for papers gathering a large number of contributions from many different countries Each submitted paper has been reviewed by international referees and finally selected by the Workshop Steering Committee WSC Furthermore key topics in the field of mobile personal satcoms have also been focused on through a few invited papers

As EMPS has been conceived to gather trends and novelties in the field of mobile personal satcoms it is tightly matched to the natural evolution of the field itself In this frame the reader will notice how the dominant topics are related to system and network issues while a very little number of contributions have been provided in the propagation and channel related areas This represents a natural trend of a field where deep efforts have been paid in the past years to understanding and modelling the physical layer and where the present interest is mostly migrating to the applications Further changes and novelties may be envisaged in the future of this field I believe that EMPS will continue to represent an effective opportunity to catch and understand more deeply this evolution *The Art and Science of Ultrawideband Antennas, Second Edition* Hans G.

Schantz,2015-06-01 This comprehensive treatment of ultrawideband UWB antennas and time domain microwave engineering serves as an invaluable practical reference for anyone involved in antenna and RF design work This authoritative volume enables readers to select the proper UWB antennas for their applications design and analyze UWB antennas and integrate these antennas in an RF system By applying time domain thinking to problems of practical interest the reader will not only learn how to build and analyze antennas but also understand them at the most fundamental level This second edition is updated and expanded throughout providing readers with a history of antennas numerous new problem sets and worked examples along with new information on plotting time domain field lines time domain reflectometry matching techniques and more This book also addresses system issues like spectral control and antenna efficiency *Antennas for IoT* Pruthi P.

Kulkarni,2023-09-30 This book provides a comprehensive overview of the latest trends in Internet of Things IoT antenna design IoT is a rapidly growing network of interconnected devices that can collect and exchange data This data can be used to improve efficiency safety and productivity in many applications including smart cities grids industrial internet computer security etc One of the main components of the IoT is the antenna Antennas are responsible for transmitting and receiving the data that flows between IoT devices To be effective IoT antennas must be small light and easy to integrate into devices They must also be able to operate in various environments including those with elevated interference levels This resource covers a wide range of topics including the challenges and opportunities involved in designing antennas for IoT applications and the importance of miniaturization in IoT antenna design A comprehensive list of references is included making it a valuable resource for further study This is an essential resource for engineers researchers and anyone who wants to learn more about the latest trends in IoT antenna design **Wearable Systems and Antennas Technologies for 5G, IOT and Medical Systems**

Albert Sabban,2020-12-08 Due to progress in the development of communication systems it is now possible to develop low cost wearable communication systems A wearable antenna is meant to be a part of the clothing or close to the body and used for communication purposes which include tracking and navigation mobile computing and public safety Examples include smartwatches with integrated Bluetooth antennas glasses such as Google Glass with Wi Fi and GPS antennas GoPro action cameras with Wi Fi and Bluetooth antennas etc They are increasingly common in consumer

electronics and for healthcare and medical applications However the development of compact efficient wearable antennas is one of the major challenges in the development of wearable communication and medical systems Technologies such as printed compact antennas and miniaturization techniques have been developed to create efficient small wearable antennas which are the main objective of this book Each chapter covers enough mathematical detail and explanations to enable electrical electromagnetic and biomedical engineers and students and scientists from all areas to follow and understand the topics presented New topics and design methods are presented for the first time in the area of wearable antennas metamaterial antennas and fractal antennas The book covers wearable antennas RF measurements techniques and measured results in the vicinity of the human body setups and design considerations The wearable antennas and devices presented in this book were analyzed by using HFSS and ADS 3D full wave electromagnetics software Explores wearable medical systems and antennas Explains the design and development of wearable communication systems Explores wearable reconfigurable antennas for communication and medical applications Discusses new types of metamaterial antennas and artificial magnetic conductors AMC Reviews textile antennas Dr Albert Sabban holds a PhD in Electrical Engineering from the University of Colorado at Boulder USA 1991 and an MBA from the Faculty of Management Haifa University Israel 2005 He is currently a Senior Lecturer and researcher at the Department of Electrical and Electronic Engineering at Kinneret and Ort Braude Engineering Colleges
