Machines that Walk Shin-Min Song, Kenneth J. Waldron, 1989 What is 16 feet long 10 feet high weighs 6 000 pounds has six legs and can sprint at 8 mph and step over a 4 foot wall The Adaptive Suspension Vehicle ASV described in this book *Machines That Walk* provides the first in depth treatment of the statically stable walking machine theory employed in the design of the ASV the most sophisticated self contained and practical walking machine being developed today Under construction at Ohio State University the automatically terrain adaptive ASV has one human operator can carry a 500 pound payload and is expected to have better fuel economy and mobility than that of conventional wheeled and tracked vehicles in rough terrain The development of the ASV is a milestone in robotics research and *Machines That Walk* provides a wealth of research results in mobility gait static stability leg design and vertical geometry design The authors treatment of statically stable gait theory and actuator coordination is by far the most complete available Shin Min Song is an Assistant Professor in the Department of Mechanical Engineering at the University of Illinois at Chicago Kenneth J Waldron is Nordholt Professor in the Department of Mechanical Engineering at Ohio State University

Learning-from-Observation 2.0 Katsushi Ikeuchi, Naoki Wake, Jun Takamatsu, Kazuhiro Sasabuchi, 2025-12-02 This book presents recent breakthroughs in the field of Learning from Observation LfO resulting from advancement in large language models LLM and reinforcement learning RL and positions it in the context of historical developments in the area LfO involves observing human behaviors and generating robot actions that mimic these behaviors While LfO may appear similar on the surface to Imitation Learning IL in the machine learning community and Programing by Demonstration PbD in the robotics community a significant difference lies in the fact that these methods directly imitate human hand movements whereas LfO encodes human behaviors into the abstract representations and then maps these representations onto the currently available hardware individual body of the robot thus indirectly mimicking them This indirect imitation allows for absorbing changes in the surrounding environment and differences in robot hardware Additionally by passing through this abstract representation filtering can occur distinguishing between important and less important aspects of human behavior enabling imitation with fewer demonstrations and less demanding demonstrations The authors have been researching the LfO paradigm for the past

decade or so Previously the focus was primarily on designing necessary and sufficient task representations to define specific task domains such as assembly of machine parts knot tying and human dance movements Recent advancements in Generative Pre trained Transformers GPT and RL have led to groundbreaking developments in methods to obtain and map these abstract representations By utilizing GPT the authors can automatically generate abstract representations from videos and by employing RL trained agent libraries implementing robot actions becomes more feasible
