owners and managers in developing energy savings estimates that can facilitate a quick assessment of the potential energy savings that might be realized when replacing existing building components with the highest efficiency equipment. It also provides algorithms to estimate greenhouse gas emission reductions that may be achieved by building energy efficiency upgrades and the impact these upgrades can have on building electrification decarbonization projects. This book focuses on the development of energy savings estimates based upon a whole building's energy consumption and the energy consumption associated with building end uses such as space heating, space cooling, ventilation, lighting, and so forth. Includes over 70 illustrative examples using algorithms to demonstrate how energy savings and greenhouse gas emission reductions may be estimated utilizing different strategies and equipment.
