Zegarlinski, 2005 In these memoirs Bobkov and Zegarlinski describe interesting developments in infinite dimensional analysis that moved it away from experimental science Here they also describe Poincaré type inequalities entropy and Orlicz spaces $L_{p,q}$ and Hardy type inequalities on the line probability measures satisfying $L_{p,q}$ inequalities on the real line expo *Conformal and Harmonic Measures on Laminations Associated with Rational Maps* Vadim A. Kaimanovich, Mikhail Lyubich, 2005 This book is dedicated to Dennis Sullivan on the occasion of his 60th birthday The framework of affine and hyperbolic laminations

provides a unifying foundation for many aspects of conformal dynamics and hyperbolic geometry. The central objects of this approach are an affine Riemann surface lamination $\mathcal{A}$ and the associated hyperbolic 3 lamination $\mathcal{H}$ endowed with an action of a discrete group of isomorphisms. This action is properly discontinuous on $\mathcal{H}$ which allows one to pass to the quotient hyperbolic lamination $\mathcal{M}$. Our work explores natural geometric measures on these laminations. We begin with a brief self contained introduction to the measure theory on laminations by discussing the relationship between leafwise transverse and global measures. The central themes of our study are leafwise and transverse conformal streams on an affine lamination $\mathcal{A}$ analogues of the Patterson Sullivan conformal measures for Kleinian groups harmonic and invariant measures on the corresponding hyperbolic lamination $\mathcal{H}$ the Anosov Sinai cocycle the corresponding basic cohomology class on $\mathcal{A}$ which provides an obstruction to flatness and the Busemann cocycle on $\mathcal{H}$. A number of related geometric objects on laminations in particular the backward and forward Poincare series and the associated critical exponents the curvature forms and the Euler class currents and transverse invariant measures λ harmonic functions and the leafwise Brownian motion are discussed along the lines. The main examples are provided by the laminations arising from the Kleinian and the rational dynamics. In the former case $\mathcal{M}$ is a sublamination of the unit tangent bundle of a hyperbolic 3 manifold its transversals can be identified with the limit set of the Kleinian group and we show how the classical theory of Patterson Sullivan measures can be recast in terms of our general approach. In the latter case the laminations were recently constructed by Lyubich and Minsky in [LM97]. Assuming that they are locally compact we construct a transverse δ conformal stream on $\mathcal{A}$ and the corresponding λ harmonic measure on $\mathcal{M}$ where $\lambda \delta \leq 2$. We prove that the exponent δ of the stream does not exceed 2 and that the affine laminations are never flat except for several explicit special cases: rational functions with parabolic Thurston orbifold.

Shock-Wave Solutions of the Einstein Equations with Perfect Fluid Sources: Existence and Consistency by a Locally Inertial Glimm Scheme Jeff Gough, Blake Temple, 2004. Demonstrates the consistency of the Einstein equations at the level of shock waves by proving the existence of shock wave solutions of the spherically symmetric Einstein equations for a perfect fluid starting from initial density and velocity profiles that are only locally of bounded total variation.
