Alternative Lithography Clivia M. Sotomayor Torres, 2012-12-06 Good old Gutenberg could not have imagined that his revolutionary printing concept which so greatly contributed to dissemination of knowledge and thus today s wealth would have been a source of inspiration five hundred years later Now it seems intuitive that a simple way to produce a large number of replicates is using a mold to emboss pattern you need but at the nanoscale nothing is simple the devil is in the detail And this book is about the devil In the following 17 chapters the authors all of them well recognized and active actors in this emerging field describe the state of the art today s technological bottlenecks and the prospects for micro contact printing and nanoimprint lithography Many results of this book originate from projects funded by the European Commission through its Nanotechnology Information Devices NID initiative NID was launched with the objective to develop nanoscale devices for the time when the red brick scenario of the ITRS roadmap would be reached It became soon clear however that there was no point to investigate only alternative devices to CMOS but what was really needed was an integrated approach that took into account more facets of this difficult undertaking Technologically speaking this meant to have a coherent

strategy to develop novel devices nanofabrication tools and circuit system architectures at the same time
