

Thermo Scientific NITON XLt, XLp and XLi 800 Series Alloy Analyzers are the world standard for nondestructive analysis and grade identification of metal alloy materials in industries ranging from primary metal production to product fabrication to scrap recycling.

NITON XLt/XLp/XLi 800

The World Standard in Portable Alloy Analysis

The Thermo Scientific NITON Analyzer offers numerous appealing features including:

- Very easy to use - even by nontechnical personnel
- Little to no sample preparation is necessary
- A truly nondestructive test with instantaneous results

Thermo Scientific NITON Analyzers can be used to analyze all components in the system, even to verify the dilution ratio of finished metals.

The need for metal alloy material verification is an increasingly important issue across a wide range of industries. Specially engineered alloys are continually being developed to better withstand the specific stresses and requirements of many different specialized applications. Though necessary and exciting, these new introductions dramatically increase the complexity of material verification and QC testing needs.

Material inspection is intensely critical in certain industries such as aircraft and aerospace manufacturing, since human lives may depend on the proper performance of alloy components. A material mix-up in a petrochemical process system can be disastrous. On a spacecraft or commercial satellite it can mean millions of dollars and years of effort wasted. In a scrap recycling facility, misidentified material can result in a returned load and a loss of consumer confidence. Conversely, identifying and upgrading alloy material provides instantaneous return on investment to scrap metal recyclers.

Thermo Scientific NITON XRF (x-ray

fluorescence) alloy analyzers are designed to quickly and reliably provide accurate alloy material verification, and have become the worldwide standard for material analysis in industries ranging from primary metal production to scrap metal recycling. NITON analyzers provide immediate nondestructive chemical analysis of alloy materials from titanium to nickel superalloys, from castings to fasteners, dip switches to scrap cuttings and turnings, incoming raw materials to final product QC. They supply fast, nondestructive analysis of high-temp, nickel and stainless steel, as well as screening for the presence of prohibited materials such as Sn, Se, Cd, and Zn in spacecraft applications, and Pb, Cr, Cd, Bi, and Hg for RoHS compliance.

Optimized to Fit a Variety of Analysis Needs

Thermo Scientific NITON Alloy Analyzers are available in a variety of form factors and excitation options to provide the optimal analyzer configuration for your analytical needs. Sealed against moisture and dust, Thermo Scientific NITON Analyzers are designed to be just as effective in the field or on the shop floor as they are in the laboratory.
