Microvascular Research: Biology and Pathology, Two-Volume Set David Shepro, 2005-11-03 The microvasculature refers to the smallest blood vessels arterial and venous that nurture the tissues of each organ Apart from transport they also contribute to the systematic regulation of the body In everyday terminology the microcirculation is where the action is Microcirculation is directly involved in such disease states as Alzheimers inflammation tumor growth diabetic retinopathy and wound healing plus cardiovascular fitness is directly related to the formation of new capillaries in large muscles Microvascular Research is the first book devoted exclusively to this vital systemic component of the cardiovascular system and provides up to date mini reviews of normal functions and clinical states The contributing authors are senior scientists with international reputation in their given disciplines This two volume set is a broad interdisciplinary work that encompasses basic research and clinical applications equally Broad coverage of both basic and clinical aspects of microvasculature research Contains 167 chapters from over 300 international authors Each chapter includes key figures and annotated references

Biology and Pathology of Astrocyte-Neuron Interactions Sergey Fedoroff, Bernhard H.J. Juurlink, J. Ronald Doucette, 2013-06-29 This volume is made up of papers presented at the Second International Altschul Symposium Biology and Pathology of Astrocyte Neuron Interactions The symposium was held in Saskatoon Canada at the University of Saskatchewan in May 1992 in memory of Rudolf Altschul a graduate of the University of Prague and a pioneer in the fields of the biology of the vascular and nervous systems Dr Altschul was Professor and Head of the Department of Anatomy at the University of Saskatchewan from 1955 to 1963 The Altschul Symposia were made possible by an endowment left by Anni Altschul and by other contributions The symposia are held biennially One of the greatest challenges for present day scientists is to uncover the mechanisms of brain function Although cellular anatomy of the nervous system has already been well outlined and indeed was delineated by the beginning of the century experimental analysis of the function of the brain is relatively recent The framework of the brain is made up of stellate cells the astrocytes which are interconnected by means of their processes thus presenting a meshwork through which the neurons send their axons accompanied by oligodendrocytes Microglia are distributed throughout the brain

Inflammation and Retinal Disease: Complement Biology and Pathology John D. Lambris, Anthony P. Adamis, 2010-08-14 Numerous studies have pointed to the key role of complement in the pathogenesis of retinal disease particularly age related macular degeneration AMD Reports about new gene associations and links to other physiological pathways are emerging almost on a weekly base Several promising clinical candidates covering a wide area of potential treatment applications are in the pipelines of both industrial and academic groups This indicates an increasing interest in complement as a therapeutic target In view of these exciting discoveries scientists from around the world convened at the First Aegean Conferences Conference on Inflammation and Retinal Disease Complement Biology and Pathology June 10 17 2007 in Crete Greece to discuss recent advances in this rapidly evolving field

This volume represents a collection of topics on the functions of complement in eye diseases pathophysiology protein structures and complement therapeutics discussed during the conference Our sincere thanks to the contributing authors for the time and effort they have devoted to writing what I consider exceptionally informative chapters in a book that will have a significant impact on the complement field We would also like to express my thanks to Rodanthi Lambris for her assistance in collating the chapters and preparing the documents for publication and I gratefully acknowledge the generous help provided by Dimitrios Lambris in managing the organization of this meeting Finally I also thank Andrea Macaluso of Springer Publishers for her supervision in this book s production John D Lambris Anthony P

Encyclopedic Reference of Vascular Biology & Pathology Andreas Bikfalvi,2013-12-19 Vascular biology has become one of the most exciting fields in the biomedical sciences The development of molecular biology and of genetic approaches in the mouse embryo has large ly contributed to our current understanding of the biology of the vascular cell Major advances have been achieved in the understanding of vascular development and in the role of the vas culature in various physiological or pathological processes The aim of the present book is to provide the reader with a reference in which information can be looked up quickly or to spark interest in a topic for later research It should be valuable not only for scientists working actively in vascular biology or in related fields but also to clinicians because it will provide both with the necessary information about the physiopathological mechanisms encountered in their daily work In addition the book should also be of great help to teachers and to students in the life sciences We did not want to organize this book in a textbook fashion Instead we chose to organize the book alphabetically thus providing the reader with rapid access to information However we also wanted the various topics dealt with in enough depth for it not to be so condensed and short as in a lexicon Thus the book lies somewhere between the two

Nitric Oxide Sensing Sagarika Bhattacharya,Subhra Samanta,Biswarup Chakraborty,2021-09-16 Although nitric oxide NO is an important biological signaling molecule its free radical electronic configuration makes it a most reactive molecule and the scariest colorless gas causing immense environmental and health hazards Detection of NO levels in biological samples and in the atmosphere is therefore crucial In the past few years extensive efforts have been devoted to developing many active sensors and effective devices for detecting and quantifying atmospheric NO NO generated in biological samples and NO exhaled in the human breath This book provides a concrete summary of recent state of the art small molecule probes and novel carbon nanomaterials used for chemical photoluminescent and electrochemical NO detection One chapter is especially dedicated to the available devices used for detecting NO in the human breath that indirectly infers to lung inflammation The authors with expertise in diverse dimensions have attempted to cover almost all areas of NO sensing

Patel, Rajkumar Rajendram, 2025-08-30 Mental health disorders affect emotions behavior and thought processes which impact on the day to day functioning and well being of the individual and the family unit The consequences can be devastating and should be placed in the context that globally there are approximately 800 million people who have a mental health disorder of which approximately 500 million have either depression or anxiety Approximately 45 million people have bipolar disorder and 20 million have schizophrenia Eating disorders affects 15 million people Substance use disorders affects nearly a billion people worldwide In many cases treatment can be carried out using pharmacological and nonpharmacological regimens However it is important to consider that the biological and pathological elements of these mental disorders are often overlooked understanding which platforms for diagnosis and treatments This comprehensive reference covers the full range of psychological disorders examining the biological aspects of what is displayed as behavior Each major psychological disorder receives its own chapter with information on genetic chemical and biological components that are key factors in the etiology and course of the pathology The interrelationship of human behavior and physical health is a complex but critical part of understanding the mental condition and this reference lays out a way of understanding the role of the biological mechanisms This handbook is designed for psychologists psychiatrists judicial professionals behavioral scientists pathologists psychologists psychiatric nurses and doctors neurologists health scientists general practitioners research scientists and all those interested in altered behavior mental health and disease It is also valuable as a personal reference book and for academic libraries that cover behavioral or medical sciences

Neurodegeneration Dennis Dickson, Roy O. Weller, 2011-09-09 Most textbooks on neurodegenerative disorders have used a classification scheme based upon either clinical syndromes or anatomical distribution of the pathology In contrast this book looks to the future and uses a classification based upon molecular mechanisms rather than clinical or anatomical boundaries Major advances in molecular genetics and the application of biochemical and immunocytochemical techniques to neurodegenerative disorders have generated this new approach Throughout most of the current volume diseases are clustered according to the proteins that accumulate within cells e g tau synuclein and TDP 43 and in the extracellular compartments e g amyloid and prion proteins or according to a shared pathogenetic mechanism such as trinucleotide repeats that are a feature of specific genetic disorders Chapters throughout the book conform to a standard lay out for ease of access by the reader and are written by a panel of International Experts Since the first edition of this book major advances have been made in the discovery of common molecular mechanisms between many neurodegenerative diseases most notably in the frontotemporal lobar degenerations FTL and motor neuron disease or amyotrophic lateral sclerosis This book will be essential reading for clinicians neuropathologists and basic neuroscientists who require the firm up to date knowledge of mechanisms diagnostic pathology and genetics of Neurodegenerative diseases that is required for progress in therapy and management
