valuable supplement to the clinical experiences gained through active engagement in the system. Hospital administrators and senior management staff will also find this book to be useful in the evaluation of quality and performance of the rapid response system, management of staff attitudes and behavior, performance of peer review, care for second victims and implementation of countermeasures for patient safety problems discovered in the course of rapid response system reviews.

Measurement Scales Used in Elderly Care Abhaya Gupta, Almas Rehman, 2017-11-22 This unique concise ready reference for daily use collates for the first time the most useful practical and simple assessment scales used in geriatric settings. It provides tools to identify clinical conditions and health outcomes objectively and reliably. It is essential as a clinical primer and everyday reference guide for all practising and training members of multidisciplinary teams including consultants and doctors in specialist training, career grade doctors and general practitioners and medical students, nurses, health visitors, dietitians and social workers, allied health professionals such as physiotherapists, occupational therapists, speech and language therapists and managers of elderly care services. Assessment is central to the practice of Geriatric Medicine. All members of the multidisciplinary team require a sound knowledge of the basic principles of measurement scales. We need to be competent in using and selecting appropriate scales, understanding which scales are valid and fit for purpose. Unfortunately up to now this has been a difficult task, often requiring reference to original papers. Dr Gupta's scholarship has come to the rescue. He has trawled through the many hundreds of scales available, selecting those most useful for the specialty. This book will be valuable to all members of the multidisciplinary team. Dr Gupta has done an excellent job outlining the theory and practice of measurement scales. He has put together an extremely useful compendium of scales. I congratulate him and wish his publication every success. I can foresee this publication becoming an essential text for every unit library and valuable book for individual clinicians. Dr Jeremy Playfer in his Foreword. This book summarises the most commonly used validated assessment scales which can be used by medical students, postgraduate trainees, consultants and the multidisciplinary team members. I hope a copy of this book will be kept on every ward, outpatient department and GP practice for daily use and reference. Professor Bim Bhowmick OBE in his Foreword. [Stroke for the Advanced Practice Clinician](#) Hardik P. Amin, 2024-10-29 This book serves as a clinical guide for the growing number of Advanced Practice Clinicians (APCs) who care for stroke patients. It covers the entire spectrum of stroke care: acute inpatient and outpatient, as well as fundamental topics like neuroanatomy and radiology. Each chapter succinctly reviews crucial topics designed to guide APCs of any experience level with clinical decision making. To further enrich the text, we incorporated guidelines, relevant trial data, written in plain language, decision making algorithms, clinical pearls, and case vignettes. Since this is a book for APCs, each chapter is written in a clear, clinically focused manner by an experienced APC with a collaborating physician. We hope this is a helpful resource not only for APCs in neurology but also for those practicing in other specialties, primary care, and students learning about stroke care.
