

Some of the world's greatest photographic achievements haven't been photographs.

Whether you're a beginner, serious amateur, or professional, Nikon offers you the world's most innovative cameras.

The extraordinary cameras you see on these pages haven't been introduced over a period of decades. They are Nikon's current line of cameras. Yet no group of cameras in the history of photography has offered so many significant innovations to more types of photographers than the SLRs you're looking at.

For instance, the Nikon FA. It is the only camera in the world with Automatic Multi-Pattern Metering—AMP for short. AMP has been called the greatest advance in 35mm photography since automatic exposure. It's quite remarkable and works this way. AMP

divides the scene you are shooting into five segments. And then individually evaluates each segment, taking into consideration such factors as contrast, varying brightness levels, and percentages of light and dark areas. Next, based on a visual assessment of nearly 100,000 photographs programmed into its computer, the FA selects the optimum exposure for your picture.

The FA is the first camera to take the guesswork out of metering under severe lighting conditions, such as snow, sand and backlight. Which makes it an ideal camera for serious amateurs and many professionals.

The FE2, on the other hand, is a terrific camera for the person who wants to grow as a photographer. It is the first automatic 35mm SLR in the world with a 1/4000 shutter speed and 1/250 flash sync speed. For the first time photographers with an automatic SLR can use a full range of apertures in bright sunlight. As well as have greater control over exposure when

using the latest 1000 ASA color-print film.

The FG is Nikon's first programmed camera. Which means at the very instant you touch the shutter button, the correct combination of aperture and shutter speed is calculated and set. The FG is also an exceptional aperture priority camera. And manual camera as well. And one of the few cameras in the world to give you through-the-lens flash metering.

Engineered for the perfectionist, Nikon FM2 is the fastest manual camera in the world. With a 1/4000 shutter speed to prevent picture blur. And 1/200 flash sync speed to prevent ghost images caused by bright ambient light. It is a one-of-a-kind camera in its class.

The F3 is Nikon's professional camera. It was the first camera in the world to offer liquid crystal display of exposure information. It was the first full system automatic camera with interchangeable viewfinders and screens. It is the only production SLR with motor drive that is

person who had never used an SLR before. And was the first camera to signal both audibly and visually when lighting conditions were undesirable. Although low priced, it's one of the most durable Nikons ever made.

In summing up, the cameras you see are not just made to take pictures. They are designed to inspire. They are engineered to go beyond the restrictions imposed by lesser cameras. They are Nikons. And no one else makes anything quite like them.

They are cameras created to take the world's greatest pictures.
