Unmatter Plasma, Relativistic Oblique-Length Contraction Factor, Neutrosophic Diagram and Neutrosophic Degree of Paradoxicity Florentin Smarandache, 2015 This book is a collection of articles notes reviews blogs and abstracts on Physics Some are published for the first time here some were previously published in journals and revised here We approach a novel form of plasma *Unmatter Plasma* The electron positron beam plasma was generated in the laboratory in the beginning of 2015 This experimental fact shows that unmatter a new form of matter that is formed by matter and antimatter bind together mathematically predicted a decade ago really exists Further we generalize the Lorentz Contraction Factor for the case when the lengths are moving at an oblique angle with respect to the motion direction and show that the angles of the moving relativistic objects are distorted Then using the Oblique Length Contraction Factor we show several trigonometric relations between distorted and original angles of moving object lengths in the Special Theory of Relativity We also discuss some paradoxes which we call neutrosophic since they are based on indeterminacy or neutrality i e neither true nor false which is the third component in neutrosophic logic We generalize the Venn diagram to a Neutrosophic Diagram which deals with vague inexact ambiguous ill defined ideas statements notions entities with unclear borders We define the neutrosophic truth table then we introduce two neutrosophic operators neuterization and antonymization operators and give many classes of neutrosophic paradoxes Other topics addressed in this book are neutrosophic physics as a new field of research neutrosophic numbers in physics neutrosophic degree of paradoxicity unparticle and unmatter multispace and multistructure nucleon clusters and others

From Playgrounds to PlayStation Carroll Pursell, 2015-06 How technology shapes play in America and vice versa In this romp through the changing landscape of nineteenth and twentieth century American toys games hobbies and amusements senior historian of technology Carroll Pursell poses a simple but interesting question What can we learn by studying the relationship between technology and play *From Playgrounds to PlayStation* explores how play reflects and drives the evolution of American culture Pursell engagingly examines the ways in which technology affects play and play shapes people The objects that children and adults play with and play on along with their games and the hobbies they pursue can reinforce but also challenge gender roles and cultural norms Inventors who often talk about playing at their work as if motivated by the pure fun of invention have used new materials and technologies to reshape sports and gameplay sometimes even crafting new extreme forms of recreation but always responding to popular demand Drawing from a range of sources including scholarly monographs patent records newspapers and popular and technical journals the book covers numerous modes and sites of play Pursell touches on the safety conscious playground reform movement the dazzling

mechanical innovations that gave rise to commercial amusement parks and the media's colorful promotion of toys pastimes and sporting events Along the way he shows readers how technology enables the forms equipment and devices of play to evolve constantly both reflecting consumer choices and driving innovators and manufacturers to promote toys that involve entirely new kinds of play from LEGOs and skateboards to beading kits and videogames Time Will Tell Mari Riess Jones, 2018-11-19 Attention is a central concept in psychology The term attention itself has persisted even though it implies a static insulated capacity that we use when it is necessary to focus upon some relevant or stimulating event Riess Jones presents a different way of thinking about attention one that describes it as a continuous activity that is based on energy fluctuating in time A majority of attention research fails to examine influence of event time structure i e a speech utterance on listeners moment to moment attending General research ignores listeners endowed with innate as well as acquired temporal biases Here attending is portrayed as a dynamic interaction of an individual within his or her surroundings Importantly this interaction involves synchronicity between an attender and external events This emphasis on time and synchronicity distinguishes the author's theory called Dynamic Attending Theory DAT from other approaches to attending which characterize attention metaphorically as a filter resource pool spotlight and so on Recent research from neuroscience has lent support to Riess Jones theory and the goal of this book is to bring this new research as well as her own to the wide audience of psychologists interested in attention more broadly **The Physics Associated with Neutrino Masses** Diego Aristizabal Sierra, Frank Franz Deppisch, Alexander Merle, 2020-01-13 This eBook is a collection of articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics unify the most influential researchers the latest key findings and historical advances in a hot research area Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office frontiersin.org/about/contact Applied Nuclear Physics at Accelerators Marco Durante, Vincenzo Patera, Yolanda Prezado, 2021-07-14 **Thin Film Solar Cells** K. ago Indeed all space vehicles today are powered by silicon solar cells But large scale terrestrial applications of solar cells still await major breakthroughs in terms of discovering new and radical concepts in solar cell device structures utilizing relatively more abundant cheap and even exotic materials and inventing simpler and less energy intensive fabrication processes No doubt this extraordinary challenge in R D has led to a virtual explosion of activities in the field of photovoltaics in the last several years

Physical Properties and Mechanical Theory of Rock Materials with Defects Chun Zhu,Bin Gong ,Weiyao Guo,2025-09-25 Under the influence of geostress seepage weathering and artificial disturbance rock materials inevitably develop defects fissures cracks pores voids faults etc which greatly reduce the physical and mechanical properties of rock materials With the development of large scale engineering construction and resource exploitation there is an increasing demand for high strength rock masses Thus the development and refinement of mechanics theories pertaining to rock materials with defects are necessary The substratum of these large scale engineering projects predominantly comprises various types of rock mass materials Those typical defects of rock mass materials often manifest at scales beyond the mesoscopic and microscopic scales but below the macroscopic scale making it difficult to discern statistical laws governing their behavior Therefore it is difficult to determine the reasonable statistical scale of volume units when constructing the theoretical system of mechanics At the same time testing the physical and mechanical parameters of rock materials with defects will also facilitate us to have a clear understanding of the reliability of the project These related research and innovations provide crucial insights for stability analysis in engineering construction

A Guide to Close Binary Systems Edwin Budding,Osman Demircan,2022-05-12 Introduction to Close Binary Systems provides a comprehensive survey and guide to the fast moving field of multiple specifically binary stars with an up to date account of research around close i e interacting pairs Such interactions allow direct quantification of stellar properties opening up factual insights into basic building blocks of the Universe The book provides a much needed update for the seminal Close Binary Systems of Zden k Kopal Following a comparable plan it presents relevant subject matter with an emphasis on building a framework of understanding to serve as a supporting resource for students and researchers The text starts from a general historical background and progresses into the main theoretical ideas supporting our prima facie interpretation of observations The central chapters explore further into these observational methods arranged according to the classic subdivisions of astrometry spectroscopy and photometry Optimal inversion of observational data into model parametrization is a theme through these chapters Significant here is the problem of how non uniqueness in modelling affects interpretation The underlying issues of stellar evolution bearing on observational evidence become paramount in the last four chapters The book proceeds step by step from directly understandable examples of unevolved pairs to the challenging cases where stars are found in more and more extreme conditions leading up to the mergers of massive black hole pairs seen in the new field of gravitational wave astronomy This is a valuable reference for postgraduate and advanced undergraduate students working in

mainstream areas of stellar astrophysics with applications also to exoplanet research which shares some methodological features Course designers for stellar astrophysics will find a useful selection of topics within this book Key features Provides a well explained and backgrounded up to date account of close binary systems in a fast moving field of research that is growing in scientific importance Surveys a wide range of case studies within the context of binary and multiple star systems Fills an acknowledged gap in current literature Cover Image A public memorial to Zdenek Kopal in his home town birthplace of Litomysl in Czechia
