

STUDENT NOTES

EXPLORING CREATION WITH

PHYSICAL SCIENCE

4th EDITION

ABOUT THIS BOOK

You may not realize it, but you are a scientist! After all, science is simply a way of studying the world around you. If you've ever wondered what makes your soft drink bubble after you pour it in your glass, you've thought like a scientist. If you've ever tried to figure out how to make a ball bounce higher, you've acted like a scientist. Science is everywhere!

This course will take you on an amazing journey. We'll have a detailed discussion about the world around us and what makes it work. We'll work our way from protons to planets and marvel at the majesty of God's creation. Like anything worth doing, this course will require your effort, but I think you will find it interesting and even enjoyable. So be prepared to be awed and amazed by what the Creator has made, from the inner workings of atoms to the grandeur of space!

COURSE OVERVIEW

This text contains 15 modules. Each module should take you about 2–2½ weeks to complete if you work on this course 4 days per school week for about 45 minutes to an hour each day. At this pace, you will complete the course in 34 weeks. Since most people follow school years that are longer than 34 weeks, there is some built-in “flex time.” Don't rush through a module just to make sure you complete it in 2 weeks. Set that as a goal,

Nye,J. Richards,R. Stuewer,2012-12-06 Modern physical science is constituted by specialized scientific fields rooted in experimental laboratory work and in rational and mathematical representations Contemporary scientific explanation is rigorously differentiated from religious interpretation although to be sure scientists sometimes do the philosophical work of interpreting the metaphysics of space time and matter However it is rare that either theologians or philosophers convincingly claim that they are doing the scientific work of physical scientists and mathematicians The rigidity of these divisions and differentiations is relatively new Modern physical science was invented slowly and gradually through interactions of the aims and contents of mathematics theology and natural philosophy since the seventeenth century In essays ranging in focus from seventeenth century interpretations of heavenly comets to twentieth century explanations of tracks in bubble chambers ten historians of science demonstrate metaphysical and theological threads continuing to underpin the epistemology and practice of the physical sciences and mathematics even while they became disciplinary specialties during the last three centuries The volume is prefaced by tributes to Erwin N Hiebert whose teaching and scholarship have addressed and inspired attention to these issues Publishers' Circular and Booksellers' Record of British and Foreign Literature ,1888
