

Lab 5: PCB design with EAGLE

In this lab you will design a PCB board that will replace all the wires and boards you've used in the first two labs.

1. Pre-Lab

On the website is an EAGLE tutorial. Do it.

- Q1.** Once you've done the tutorial, get a screen capture of your board design. It should look similar to the figure to the right.
- Q2.** Do the following tutorials which cover how to create a device (a package and symbol combined together is a device)

- <https://www.autodesk.com/products/eagle/blog/library-basics-part-1-creating-first-package-autodesk-eagle/>
 - The tutorial is slightly out of date. Minor issues include that the library interface is a bit different (second screen capture) and that layer 21 is grey rather than yellow. Don't forget to save before you move on to the next step. The two below have similar issues, but should be easy to get around.

- <https://www.autodesk.com/products/eagle/blog/library-basics-part-3-creating-first-device-autodesk-eagle/>

Provide a screen capture of your completed device. It should look something like this:

FPGA-based Prototyping Methodology Manual Doug Amos, Austin Lesea, Rene Richter, 2011 This book collects the best practices FPGA based Prototyping of SoC and ASIC devices into one place for the first time drawing upon not only the authors own knowledge but also from leading practitioners worldwide in order to present a snapshot of best practices today and possibilities for the future The book is organized into chapters which appear in the same order as the tasks and decisions which are performed during an FPGA based prototyping project We start by analyzing the challenges and benefits of FPGA based Prototyping and how they compare to other prototyping methods We present the current state of the available FPGA technology and tools and how to get started on a project The FPMM also compares between home made and outsourced FPGA platforms and how to analyze which will best meet the needs of a given project The central chapters deal with implementing an SoC design in FPGA technology including clocking conversion of memory partitioning multiplexing and handling IP amongst many other subjects The important subject of bringing up the design on the FPGA boards is covered next including the introduction of the real design into the board running embedded software upon it in and debugging and

iterating in a lab environment Finally we explore how the FPGA based Prototype can be linked into other verification methodologies including RTL simulation and virtual models in SystemC Along the way the reader will discover that an adoption of FPGA based Prototyping from the beginning of a project and an approach we call Design for Prototyping will greatly increase the success of the prototype and the whole SoC project especially the embedded software portion Design for Prototyping is introduced and explained and promoted as a manifesto for better SoC design Readers can approach the subjects from a number of directions Some will be experienced with many of the tasks involved in FPGA based Prototyping but are looking for new insights and ideas others will be relatively new to the subject but experienced in other verification methodologies still others may be project leaders who need to understand if and how the benefits of FPGA based prototyping apply to their next SoC project We have tried to make each subject chapter relatively standalone or where necessary make numerous forward and backward references between subjects and provide recaps of certain key subjects We hope you like the book and we look forward to seeing you on the FPMM on line community soon go to www.synopsys.com/fpmm
