The Plunder of Black America Calvin Schermerhorn, 2025-02-11 The long history of the racial wealth gap in America told through the stories of seven Black families who struggled to build wealth over multiple generations Wealth is central to the American pursuit of happiness and is an overriding measure of well being Yet wealth is conspicuously absent from African American households

Why do some 35 million Black American families have zero or negative wealth? Historian Calvin Schermerhorn traces four hundred years of Black dispossession and decapitalization what Frederick Douglass called plunder through the stories of families who have strived to earn and keep the fruits of their toils. Their struggles reveal that the ever evolving strategies to strip Black income and wealth have been critical to sustaining a structure of racialized disadvantage. These accounts also tell of the quiet heroism of those who worked to overcome obstacles and defy the plunder. From the story of Anthony and Mary Johnson abducted from Angola and brought to Virginia in 1619 to the enslaved Black workers dispossessed by the Custis Washington family to Venture Smith born Brothier Furro who purchased his freedom to three generations of a family enslaved in the South who moved north after Emancipation to the Tulsa massacre and the subprime lending crisis Schermerhorn shows that we cannot reckon with today's racial wealth inequality without understanding its unrelenting role in American history.

Manufacturing Green Prosperity Jon Rynn, 2010-07-12 This timely set of solutions based on a new theory of economics shows how America can reverse its inexorable economic decline and stop the bleeding of its middle class by rebuilding its manufacturing sector on a green basis. *Manufacturing Green Prosperity: The Power to Rebuild the American Middle Class* connects two critical issues: the importance of manufacturing to the growth and fair distribution of national wealth and the need to create an environmentally sustainable society. In so doing, the book offers groundbreaking arguments demonstrating the centrality of manufacturing and shows ways in which creating a green economy will rebuild U.S. manufacturing and expand the middle class. Drawing from the fields of political science, economics, ecology, history, engineering, and philosophy, the author challenges existing myths about manufacturing, exposes the weaknesses of neoclassical economics, and proposes a production-centered alternative. America, he persuasively argues, needs a sophisticated green manufacturing base in order to create an entirely new transportation and energy infrastructure, one that will make cities ecologically sustainable, prevent the worst effects of global warming, protect vulnerable ecosystems, and counter the depletion of oil, coal, and other critical natural resources.
