Protein Pharmacokinetics And Metabolism Protein Pharmacokinetics And Metabolism:

Protein Pharmacokinetics and Metabolism Bobbe L. Ferraiolo, Marjorie A. Mohler, Carol A. Gloff, 1992-11-30

Investigation of the pharmacokinetics and metabolism of human proteins has escalated over the last two decades because of the use of recombinant human proteins as therapeutic agents. In addition, the development and improvement of analytical techniques enabling the detection of minute quantities of proteins in biological matrices have aided this process. In assembling this volume, we sought to provide a state of the art assessment of the pharmacokinetics and metabolism of protein therapeutics through complete reviews of selected examples. A comprehensive review of all protein therapeutics was not attempted; the majority of the therapeutic protein classes and crucial scientific issues have been addressed. However, therefore, we are confident that this volume will provide a useful reference for scientists in this field. The volume has been divided into two general parts. The first part, Chapters 1-3, is composed of general reviews of topics of importance in pharmacokinetic metabolism studies of proteins: goals and analytical methodologies, effects of binding proteins, and effects of antibody induction, respectively. The second part, Chapters 4-8, consists of specific detailed reviews by therapeutic protein class: growth factors and hormones, cytokines, cardiovascular proteins, hematopoietic proteins, and antibodies, respectively. The editors are grateful to the contributors for the patience, personal sacrifice, and perseverance required to complete this volume.

Marjorie A Mohler 1 Introduction **Proteins and Peptides** Randall J. Mersny, Ann Daugherty, 2009-10-19 Addressing the increased use of protein and peptide candidates as treatments for previously untreatable diseases this comprehensive and progressive source provides the reader with a roadmap to an increased understanding of issues critical for successfully developing a protein or peptide therapeutic candidate Proteins and Peptides is *Applied Pharmacokinetics & Pharmacodynamics* Michael E. Burton, 2006 The definitive advanced level clinical pharmacokinetics text is now in its Fourth Edition with new emphasis on the relationship between pharmacokinetics and pharmacodynamics Written by 70 leading researchers and practitioners this book is a rigorous yet practical text on the application of pharmacokinetic methods pharmacodynamic principles and pharmacotherapeutic data for optimal individualized drug therapy This edition includes case studies that apply concepts to actual patient problems New chapters cover tacrolimus mycophenolic acid sirolimus antipsychotics and critical evaluation of therapeutic drug monitoring methods Other new features include more drawings and reference tables and an appendix on outcome studies with therapeutic drug monitoring *Metabolism, Pharmacokinetics, and Toxicity of Functional Groups* Dennis A. Smith, 2010 Until now the area of drug metabolism and pharmacokinetics has been lacking in texts written for the Medicinal Chemist This outstanding book aimed at postgraduate medicinal chemists and those working in industry fills this gap in the literature Written by medicinal chemists and ADMET scientists with a combined experience of around 300 years this aid to discovering drugs addresses the absorption distribution metabolism excretion and toxicity ADMET issues associated with drugs The book starts by describing drug targets and their structural motifs before moving on to explain ADMET for the medicinal chemist It is the functional groups which most profoundly influence the drug molecules of which they form a part They characterise the pharmacology are essential to the activity and alter the ADMET characteristics of each drug Their effects follow a pattern thus allowing medicinal chemists to predict and overcome potential challenges For this reason the Editors have taken the unique approach of dividing the remainder of the book into chapters which each focus on a different functional group They describe drugs containing the functional group under consideration explain why the group is there and outline its physicochemical properties before going on to detail the ADMET issues Where possible prodrugs and bioisosteres which may give alternative ADMET outcomes are described The chapters cross refer where similar matters are covered but individual chapters can be used in a stand alone manner The book ends with a discussion of future targets and chemistry needs **Proteins and Peptides** Randall J. Mersny, Ann Daugherty, 2009-10-19 Addressing the increased use of protein and peptide candidates as treatments for previously untreatable diseases this comprehensive and progressive source provides the reader with a roadmap to an increased understanding of issues critical for successfully developing a protein or peptide therapeutic candidate Proteins and Peptides is **Pharmacokinetics of Drugs** Peter G. Welling, Luc P. Balant, 2012-12-06 The author of this Foreword has recently retired after spending 25 years in academia and 15 years in the pharmaceutical industry Most of this time has been spent following and hopefully in some

instances contributing to advancement of the discipline of pharmacokinetics During the last 40 years pharmacokinetics has grown from a fledgling in the 1950s to an adult in the 1990s The late development of the discipline of pharmacokinetics relative to other disciplines such as chemistry bio chemistry and pharmacology probably stems both from general ignorance of the importance of the time course of concentration effect relationships in drug therapy and from our technical inability to do anything about it had we been more enlightened Just as the end of the historical dark ages had to await the beginning of the Carolingian revival so the end of the pharma co kinetic dark age had to await the discovery of adequate analytical methods and also an intellectual leap of faith to accept that drug action is in some way dependent on receptor site occupancy and therefore on drug con centration The recent evolution of pharmacokinetics has occurred in three phases which may be identified as those of discovery stabilization and rationaliz ation The discovery phase which occurred in the 1950s and 1960s esta blished the mathematics and concepts of modern pharmacokinetics and sought areas of application ranging from model independent methods through compartment approaches to complex physiological models
