Psychological Aspects of Cancer Brian I. Carr,JENNIFER STEEL,2016-08-23 Psychological Aspects of Cancer A Guide to Emotional and Psychological Consequences of Cancer Their Causes and Their Management opens with two essays on the biological basis of emotion mental driven body processes and disease The consequence of such considerations is that since thoughts and emotions can be modulated and changed by health care professionals psychological counseling should be seen not only as a way to help patients cope but possibly to

influence the disease itself A unique overview of a key area of cancer care this important title then proceeds to offer a section on genetic predispositions to cancer and the psychological considerations involved in screening and pre emptive therapies and decision making in cancer therapy A third section deals with the philosophical and religious underpinnings of psychological factors involved in coping with disease state stressors and the roles of hope in coping The fourth section is an acknowledgement that patients with cancer live in a social context which often includes a partner and or caregiver The fifth section includes several essays on aspects and modalities of care giving that are designed to help patients coping with their cancer and its aftermath which increasingly extends for years An important title covering key aspects of one of the most troubling disorders of our time *Psychological Aspects of Cancer A Guide to Emotional and Psychological Consequences of Cancer Their Causes and Their Management* will provide the busy practitioner with cutting edge knowledge as well as practical information that can translate into better care for patients with cancer *Psychological Aspects of Cancer* A. J. Endrey,1984 *Cancer and Emotion* Jennifer Barraclough,1999-01-26 *Cancer and Emotion A Practical Guide to Psycho Oncology* Third Edition Jennifer Barraclough Consultant in Psychological Medicine Oxford Radcliffe NHS Trust Oxford UK Emotional aspects of cancer affect patients their partners and families and the staff providing care Most of those involved experience emotional distress Some develop severe anxiety depression or other psychiatric syndromes Whether emotional factors influence the medical prognosis of cancer remains uncertain but there is no doubt that emotional aspects of this disease are central to patients quality of life Many of the common problems can be prevented or treated effectively provided their importance is recognised *Cancer and Emotion* is a descriptive introduction to adult psycho oncology Primarily written for healthcare professionals in oncology palliative care general practice and mental health it will also appeal to interested lay readers including patients This third edition has been updated throughout with expanded coverage of some topical issues including psychological aspects of cancer pain holistic approaches to cancer and organisation of a psycho oncology service The book also contains numerous personal accounts written by patients themselves *Psychological Aspects of Early Breast Cancer* Colette Ray,Michael Baum,2013-03-07 Physical illness cannot be effectively treated other than in the context of the psychological factors with which it is associated The body may have the disease but it is the patient who is ill Research psychologists from a number of different backgrounds have in the past few decades turned increasingly to the study of physical illness and there is now an extensive literature on preventive behaviors the role of stress in the etiology of illness the patient s reactions to illness and its treatment and the physician patient relationship At the same time practicing clinical psychologists have extended their concern beyond the treatment of speci fically psychiatric disorders to include also the psychological care of people experiencing distress through illness or injury Traditionally these patients have tended to fall through the net unless their distress is so great that it assumes the proportion of a psychiatric disorder that can then be treated in its own right Because the physical disorder is the primary one its existence has detracted from the salience of the

very real emotional disturbance to which it can give rise Moreover emotional reactions in this setting being the norm seems to have been regarded as not meriting special attention and care This situation is changing and it is not just psychologists or psychiatrists who are responsible for the shift in attitudes Within general medicine itself there is now a renewed emphasis on the care of the whole patient and not just the disease
