Seel, 2011-10-05 Over the past century educational psychologists and researchers have posited many theories to explain how individuals learn i e how they acquire organize and deploy knowledge and skills The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation cognition metacognition etc and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology Beyond folk psychology and its naive theories of learning psychological learning theories can be grouped into some basic categories such as behaviorist learning theories connectionist learning theories cognitive learning theories constructivist learning theories and social learning theories Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology education information science biology and as a result of the emergence of computer technologies especially also in the field of computer sciences and artificial intelligence As a consequence machine learning struck a chord in the 1980s and became an important field of the learning sciences in general As the learning sciences became more specialized and complex the various fields of interest were widely spread and separated from each other as a consequence even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely The *Encyclopedia of the Sciences of Learning* provides an up to date broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields including relevant areas of instruction pedagogy cognitive sciences and especially machine learning and knowledge engineering This modern compendium will be an indispensable source of information for scientists educators engineers and technical staff active in all fields of learning More specifically the *Encyclopedia* provides fast access to the most relevant theoretical terms provides up to date broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies supplies clear and precise explanations of the theoretical terms cross references to related entries and up to date references to important research and publications The *Encyclopedia* also contains biographical entries of individuals who have substantially contributed to the sciences of learning the entries are written by a distinguished panel of researchers in the various fields of the learning sciences **Leo Strauss on Science** Svetozar Y. such as Is there a human wisdom independent of science What is the relation between poetry and mathematics or between self knowledge and theoretical physics And how necessary is it for the human species to exist immutably in order for the classical analysis of human life to be correct In pursuing these questions Minkov aims to change the conversation about Strauss one of the great thinkers of the past century *The Journal of Education* ,1894 **Scientific Statesmanship, Governance and the History of Political Philosophy** Kyriakos N. Rykkja Gilbert, 2021-05-03 Ancient philosophy has from the outset inspired phenomenological philosophers in a special way. Phenomenological Interpretations of Ancient Philosophy offers fresh perspectives on the manner in which ancient Greek thought has influenced phenomenology and traces the history of this reception. Unlike various related treatments, the present volume offers a broad account of this topic that includes chapters on Edmund Husserl, Martin Heidegger, Hans Georg Gadamer, Jacob Klein, Hannah Arendt, Eugen Fink, Jan Patočka, Emmanuel Levinas, and Jacques Derrida. This collection of essays, edited by Kristian Larsen and Páll Rykkja Gilbert, is addressed to students of ancient philosophy and the phenomenological tradition as well as to readers who have a general interest in the fascinating yet complex connection between ancient Greek thought and phenomenological philosophy.

Contributions by Jussi Backman, Páll Rykkja Gilbert, Burt Hopkins, Filip Karfík, Alexander Kozin, Kristian Larsen, Arnaud Macé, Claudio Majolino, Hans Ruin, Thomas Schwarz, Wentzer Vigdis Songe Møller, Tanja Staehler, Morten S. Thaning, and Charlotta Weigelt.

From the Socratics to the Socratic Schools

Ugo Zilioli, 2015-02-20 In the two golden centuries that followed the death of Socrates, ancient philosophy underwent a tremendous transformation that culminated in the philosophical systematizations of Plato, Aristotle, and the Hellenistic schools. Fundamental figures other than Plato were active after the death of Socrates; his immediate pupils, the Socratics, took over his legacy and developed it in a variety of ways. This rich philosophical territory has, however, been left largely underexplored in the scholarship. This collection of eleven previously unpublished essays by leading scholars fills a gap in the literature, providing new insight into the ethics, metaphysics, and epistemology as developed by key figures of the Socratic schools. Analyzing the important contributions that the Socratics and their heirs have offered to ancient philosophical thought, as well as the impact these contributions had on philosophy as a discipline, this book will appeal to researchers and scholars of Classical Studies as well as Philosophy and Ancient History.
