Multimodal Biometrics and Intelligent Image Processing for Security Systems Gavrilova, Marina L., Monwar, Maruf, 2013-03-31 This book provides an in depth description of existing and fresh fusion approaches for multimodal biometric systems covering relevant topics affecting the security and intelligent industries Provided by publisher

Biometrics: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources, 2016-08-30 Security and authentication issues are surging to the forefront of the research realm in global society As technology continues to evolve individuals are finding it easier to infiltrate various forums and facilities where they can illegally obtain information and access By implementing biometric authentications to these forums users are able to prevent attacks on their privacy and security Biometrics Concepts Methodologies Tools and Applications is a multi volume publication highlighting critical topics related to access control user identification and surveillance technologies Featuring emergent research on the issues and challenges in security and privacy various forms of user authentication biometric applications to image processing and computer vision and security applications within the field this publication is an ideal reference source for researchers engineers technology developers students and security specialists [Machine Learning for Biometrics](#) Partha Pratim Sarangi, Madhumita Panda, Subhashree Mishra, Bhabani Shankar Prasad Mishra, Banshidhar Majhi, 2022-01-21 Machine Learning for Biometrics Concepts Algorithms and Applications highlights the fundamental concepts of machine learning processing and analyzing data from biometrics and provides a review of intelligent and cognitive learning tools which can be adopted in this direction Each chapter of the volume is supported by real life case studies illustrative examples and video demonstrations The book elucidates various biometric concepts algorithms and applications with machine intelligence solutions providing guidance on best practices for new technologies such as e health solutions Data science Cloud computing and Internet of Things etc In each section different machine learning concepts and algorithms are used such as different object detection techniques image enhancement techniques both global and local feature extraction techniques and classifiers those are commonly used data science techniques These biometrics techniques can be used as tools in Cloud computing Mobile computing IOT based applications and e health care systems for secure login device access control personal recognition and surveillance Covers different machine intelligence concepts algorithms and applications in the field of cybersecurity e health monitoring secure cloud computing and secure IOT based operations Explores advanced approaches to improve recognition performance of biometric systems with the use of recent machine intelligence techniques Introduces detection or segmentation techniques to detect biometric characteristics from the background in the input sample

[Signal and Image Processing for Biometrics](#) Jacob Scharcanski, Hugo Proença, Eliza Du, 2014-02-20 This volume offers a guide to the state of the art in the fast evolving field of biometric recognition to newcomers and experienced practitioners It is focused on the emerging strategies to perform biometric recognition under uncontrolled data acquisition conditions The

mainstream research work in this field is presented in an organized manner so the reader can easily follow the trends that best suits her his interests in this growing field The book chapters cover the recent advances in less controlled covert data acquisition frameworks segmentation of poor quality biometric data biometric data quality assessment normalization of poor quality biometric data contactless biometric recognition strategies biometric recognition robustness data resolution illumination distance pose motion occlusions multispectral biometric recognition multimodal biometrics fusion at different levels high confidence automatic surveillance *Multimodal Biometric Systems* Rashmi Gupta,Manju Khari,2021-09-26

Many governments around the world are calling for the use of biometric systems to provide crucial societal functions consequently making it an urgent area for action The current performance of some biometric systems in terms of their error rates robustness and system security may prove to be inadequate for large scale applications to process millions of users at a high rate of throughput This book focuses on fusion in biometric systems It discusses the present level the limitations and proposed methods to improve performance It describes the fundamental concepts current research and security related issues The book will present a computational perspective identify challenges and cover new problem solving strategies offering solved problems and case studies to help with reader comprehension and deep understanding This book is written for researchers practitioners both undergraduate and post graduate students and those working in various engineering fields such as Systems Engineering Computer Science Information Technology Electronics and Communications Security and Privacy in Biometrics Patrizio Campisi,2013-06-28 This important text reference presents the latest secure and privacy compliant techniques in automatic human recognition Featuring viewpoints from an international selection of experts in the field the comprehensive coverage spans both theory and practical implementations taking into consideration all ethical and legal issues Topics and features presents a unique focus on novel approaches and new architectures for unimodal and multimodal template protection examines signal processing techniques in the encrypted domain security and privacy leakage assessment and aspects of standardization describes real world applications from face and fingerprint based user recognition to biometrics based electronic documents and biometric systems employing smart cards reviews the ethical implications of the ubiquity of biometrics in everyday life and its impact on human dignity provides guidance on best practices for the processing of biometric data within a legal framework **Multimodal Biometric and Machine Learning Technologies** Sandeep Kumar,Deepika Ghai,Arpit Jain,Suman Lata Tripathi,Shilpa Rani,2023-10-18 MULTIMODAL BIOMETRIC AND MACHINE LEARNING TECHNOLOGIES With an increasing demand for biometric systems in various industries this book on multimodal biometric systems answers the call for increased resources to help researchers developers and practitioners Multimodal biometric and machine learning technologies have revolutionized the field of security and authentication These technologies utilize multiple sources of information such as facial recognition voice recognition and fingerprint scanning to verify an individual s identity The need for enhanced security and authentication has become increasingly important and with

the rise of digital technologies cyber attacks and identity theft have increased exponentially Traditional authentication methods such as passwords and PINs have become less secure as hackers devise new ways to bypass them In this context multimodal biometric and machine learning technologies offer a more secure and reliable approach to authentication This book provides relevant information on multimodal biometric and machine learning technologies and focuses on how humans and computers interact to ever increasing levels of complexity and simplicity The book provides content on the theory of multimodal biometric design evaluation and user diversity and explains the underlying causes of the social and organizational problems that are typically devoted to descriptions of rehabilitation methods for specific processes Furthermore the book describes new algorithms for modeling accessible to scientists of all varieties Audience Researchers in computer science and biometrics developers who are designing and implementing biometric systems and practitioners who are using biometric systems in their work such as law enforcement personnel or healthcare professionals

Encyclopedia of Biometrics

Stan Z. Li, 2009-08-27 With an A Z format this encyclopedia provides easy access to relevant information on all aspects of biometrics It features approximately 250 overview entries and 800 definitional entries Each entry includes a definition key words list of synonyms list of related entries illustration s applications and a bibliography Most entries include useful literature references providing the reader with a portal to more detailed information

Touchless Fingerprint Biometrics

Ruggero Donida Labati, Vincenzo Piuri, Fabio Scotti, 2015-08-14 This book offers the first comprehensive analysis of touchless fingerprint recognition technologies It gives an overview of the state of the art describes relevant industrial applications and presents new techniques to efficiently and effectively implement advanced solutions based on touchless fingerprint biometrics It considers current problems in developing high accuracy touchless recognition technology and recommends future work that can be done to address them A state of the art presentation of the field it demonstrates that applying touchless technologies to biometric recognition systems shows particular promise

Biometrics and Identity

Management Ben Schouten, Niels Christian Juul, Andrzej Drygajlo, Massimo Tistarelli, 2008-12-23 A key driving factor for biometrics is the widespread national and international deployment of biometric systems that has been initiated in the past two years and is about to accelerate While nearly all current biometric deployments are government led and principally concerned with national security and border control scenarios it is now apparent that the widespread availability of biometrics in everyday life will also spin out an ever increasing number of private applications in other domains Crucial to this vision is the management of the user's identity which does not only imply the creation and update of a biometric template but requires the development of instruments to properly handle all the data and operations related to the user identity COST Action 2101 on Biometrics for Identity Documents and Smart Cards has created as a valuable and effective platform for close collaboration of European scientists from academia and industry researching biometrics for identity documents and smartcards This has led to the continuous advances achieved in various classes of biometrics and their implementations in the identity management

domain These contributions to knowledge in this field were first presented at the First European Workshop on Biometrics and Identity Management BioID 2008 organized in Roskilde Denmark during May 7-9 2008
