The Informatics Handbook S.A. Fist,2012-12-06 This is not a dictionary and nor is it an encyclopedia It is a reference and compendium of useful information about the converging worlds of computers communications telecommunications and broadcasting You could refer to it as a guide for the Information Super Highway but this would be pretentious It aims to cover most of the more important terms and concepts in the developing discipline of Informatics which in my definition includes the major converging technologies and the associated social and cultural issues Unlike a dictionary this handbook makes no attempt to be prescriptive in its definitions Many of the words we use today in computing and communications only vaguely reflect their originations And with such rapid change older terms are often taken twisted inverted and mangled to the point where any attempt by me to lay down laws of meaning would be meaningless The information here is descriptive I am concerned with usage only This book therefore contains keywords and explanations which have been culled from the current literature from technical magazines newspapers the Internet forums etc This is the living language as it is being used today not a historical artifact of 1950s computer science

Zephyr RTOS Embedded C Programming Andrew Elias,2024-09-06

These days the term Real Time Operating System RTOS is used when referring to an operating system designed for use in embedded microprocessors or controllers The Real Time part refers to the ability to implement applications that can rapidly responding to external events in a deterministic and predictable manner RTOS based applications have to meet strict deadline constraints while meeting the requirements of the application One way of ensuring that urgent operations are handled reliably is to set task priorities on each task and to assign higher priorities to those tasks that need to respond in a more timely manner Another feature of real time applications is the careful design and implementation of the communication and synchronization between the various tasks The Zephyr RTOS was developed by Wind River Systems and subsequently open sourced Its design and implementation are oriented towards the development of time critical IoT Internet of Things and IIoT Industrial Internet of Things applications and consequently it has a rich feature

set for building both wireless and wired networking applications However with a rich feature set comes a fairly steep learning curve This book covers the foundations of programming embedded systems applications using Zephyr s Kernel services After introducing the Zephyr architecture as well as the Zephyr build and configuration processes the book will focus on multi tasking and inter process communication using the Zephyr Kernel Services API By analogy with embedded Linux programming books this book will be akin a Linux course that focuses on application development using the Posix API In this case however it will be the Zephyr Kernel Services API that will be the API being used as well as the Posix API features supported by Zephyr What You ll learn An Overview of the Cortex M Architecture Advanced data structures and algorithms programming linked lists circular buffers and lists How to build Zephyr Applications including setting up a Command Line Zephyr Development Environment on Linux Task scheduling and pre emption patterns used in Real Time Operating Systems Scheduling Interrupts and Synchronization including threads scheduling and system threads Overview of Symmetric Multiprocessing SMP and Zephyr support for SMP Memory management including memory heaps memory slabs and memory pools Who This Book Is For Embedded Systems programmers IoT and IIoT developers researchers BLE application developers Industrial Control Systems Smart Sensors Medical Devices Smart Watches Manufacturing Robotics Also of use to undergraduate and masters in computer science and digital electronics courses
