Protein-Protein Interactions as New Drug Targets Enno Klussmann, John Scott, 2008-05-20 Disease relevant intracellular protein protein interactions occurring at defined cellular sites possess great potential as drug targets They permit highly specific pharmacological interference with defined cellular functions Drugs targeting such interactions are likely to act with fewer side effects than conventional medication influencing whole cell functions This book discusses therapeutically relevant protein protein interactions with a major focus on scaffolding proteins tethering signal transduction processes to defined cellular compartments by direct protein protein interactions Recent advances in the development of pharmacological agents interfering with protein protein interactions are highlighted *Protein-Protein Interactions as New Drug Targets* Enno Klussmann, John Scott, 2008-06-23 Disease relevant intracellular protein protein interactions occurring at defined cellular sites possess great potential as drug targets They permit highly specific pharmacological interference with defined cellular functions Drugs targeting such interactions are likely to act with fewer side effects than conventional medication influencing whole cell functions This book discusses therapeutically relevant protein protein interactions with a major focus on scaffolding proteins tethering signal transduction processes to defined cellular compartments by direct protein protein interactions Recent advances in the development of pharmacological agents interfering with protein protein interactions are highlighted

Approaches to Drug Discovery Ulrich Nielsch, Ulrike Fuhrmann, Stefan Jaroch, 2016-03-30 This volume gives an overview of state of the art technologies and future developments in the field of preclinical pharmaceutical research A balanced mix of experts from academia and industry give insight in selected new developments in the drug discovery pathway The topics cover the different parts of the drug discovery process starting with new developments in the target identification and validation area The lead generation part as a next step focuses on the requirements and technologies to identify new small molecules as lead compounds for further optimization in a second section the technologies to identify biologics as leads are

addressed The final part focuses on the pharmacological models and technologies to characterize new compounds and the impact of biomarkers to facilitate the transfer of drug candidates into the development phase *Protein-Protein Interactions in Human Disease, Part B*, 2018-02-17 Protein Protein Interactions in Human Disease Volume 111 Part B promotes further research and development in the protein interaction network in order to identify critical proteins involved in the etiology of human diseases and locate new protein targets for drug development Thus this volume is of considerable interest to protein chemists pharmacologists cell biologists immunologists structural biologists computational biochemists and other researchers working in the field In addition these articles would be of great benefit to medical biology and pharmacology students who specialize in this field Describes advances in the application of powerful techniques in studying and analyzing protein protein interactions Ideal for a wide audience of researchers specialists and students Written by authorities in their field Contains a number of high quality illustrations figures and tables that support the presented information **Molecular**

pharmacological approaches against lung diseases: targeted drug discovery Poonam Arora,Lalit Mohan Nainwal ,Seyyed Shamsadin Athari,2024-07-12 Molecular Pharmacological approaches against lung diseases targeted drug discovery The global burden of lung diseases is rising continuously and is a constant concern Lung diseases of concern including asthma infection pneumonia lung cancer abnormal build up of fluid swelling and inflammation both neoplastic and non neoplastic diseases are listed as the third leading cause of death by the World Health Organization The most common disease in the lungs includes asthma cystic fibrosis chronic obstructive pulmonary disease etc The respiratory issues listed here among others are exacerbated by environmental toxicants which directly come in contact with the lung architecture thereby causing lung pathologies resulting in the exacerbated immune response in affected patients Biologically active molecules including small or large molecular weight compounds from natural or synthetic sources exhibit prominent pharmacological properties that impact health by modulating disease pathophysiology and influence the ligand receptor interactions depending upon the pathway and their bioavailability **The Future of Pharmaceuticals** Sarfaraz K. Niazi,2022-02-28

Before now biological systems could only be expressed in terms of linear relationships however as knowledge grows and new techniques of analysis on biological systems is made available we are realizing the non linearity of these systems The concepts and techniques of nonlinear analysis allow for more realistic and accurate models in science The Future of Pharmaceuticals A Nonlinear Analysis provides an opportunity to understand the non linearity of biological systems and its application in various areas of science primarily pharmaceutical sciences This book will benefit professionals in pharmaceutical industries academia and policy who are interested in an entirely new approach to how we will treat disease in the future Key Features Addresses a new approach of nonlinear analysis Applies a theory of projection to chalk out the future instead of basing on linear evolution Provides an opportunity to better understand the non linearity in biological systems and its applications in various areas of science primarily pharmaceutical sciences Helps change the thought process

for those looking for answers to their questions which they do not find in the linear relationship approach Encourages a broader perspective for the creative process of drug development

Exploring the Vertebrate Central Cholinergic Nervous System Alexander G. Karczmar, 2007-04-05 Even if the weapons of mass destruction WMD and among them stocks of organophosphorus OP agents also referred to as war gases and nerve gases were not found in Iraq following the US Iraq war the relative ease with which these substances can be made from harmless precursors and the low cost of their manufacture will continue to fascinate power hungry ruthless dictators as well as multinational and international terrorists particularly as the close relationship between the OP agents and useful insecticides makes it easy to disguise the importation and purchase of small amounts of the precursors Indeed the use by Saddam Hussein of a nerve gas against the Kurds and his possible employment of the OP agents during his war with Iran and the Sarin attack in the Tokyo underground by an extremist religious set magnetized the world with respect to the OP drugs As these drugs exert their toxicity via their cholinergic action on the nervous particularly central nervous system it is no wonder that the research in the cholinergic field attracts and merits our intense attention These considerations underlie the significance of this book as Alex Karczmar devotes an entire chapter of Exploring the Vertebrate Central Cholinergic Nervous System to anticholinesterases antiChEs and as he is an acknowledged expert in the field of cholinergic toxicity as well as a consultant to the Surgeon General of the U S Army
