Lansing Taylor, 2008-02-04 There has always been some tension between proponents of hypothesis driven and discovery driven research in the broad field of life sciences Academic research has been primarily focused on hypothesis driven research However the success of the human genome project a discovery driven research approach has opened the door to adding other types of discovery driven research to a continuum of research approaches In contrast drug discovery research in the pharmaceutical industry has embraced discovery driven research for many years A good example has been

the discovery of active compounds from large chemical libraries through screening campaigns The success of the human genome project has also demonstrated the need for both academic researchers and industrial researchers to now understand the functions of genes and gene products The cell is the basic unit of life and it has been at the cellular level where function can be demonstrated most cost effectively and rapidly High content screening HCS was developed by Cellomics Inc in the mid 1990s to address the need for a platform that could be used in the discovery driven research and development required to understand the functions of genes and gene products at the level of the cell

Microarrays Jang B. Rampal, 2007-07-27 Microarray Technology Volumes 1 and 2 present information in designing and fabricating arrays and binding studies with biological analytes while providing the reader with a broad description of microarray technology tools and their potential applications The first volume deals with methods and protocols for the preparation of microarrays The second volume details applications and data analysis which is important in analyzing the enormous data coming out of microarray experiments Among the topics discussed in Volume 1 Synthesis Methods are matrices in the synthesis of microarrays array optimization processes array based comparative genomic hybridization 60 mer oligonucleotide probes bifunctional reagents NTMTA and NTPAC and high density arrays using digital microarray synthesis platforms Other topics include multiplex ligation dependent probe amplification MLPA hybridization conditions in situ synthesized oligo arrays peptide arrays high density replication tools HDRT protocols for the quantification of oligo hybridization glyco bead arrays and an investigation into the emerging nano technology Microarray Technology Volumes 1 and 2 provide ample information to all levels of scientists from novice to those intimately familiar with array technology

Omics and System Biology Approaches for Delivering Better Cereals Dinesh Kumar Saini, Chittaranjan Kole, 2024-11-08 Cereals like wheat rice maize and barley have long been the dominant crops in agriculture providing a significant portion of our food supply Plant breeders and geneticists have always been interested in improving the yield and quality of cereals The primary challenges in cereal breeding lie in adapting to climate change and enhancing yield and stress tolerance In recent years omics approaches such as genomics transcriptomics proteomics and metabolomics have emerged as valuable tools to understand the genetic and molecular basis of cereal development under optimum and stress conditions However studying individual datasets for different cereals has limited our comprehensive understanding of complex traits and biological networks To overcome this limitation a systems biology approach is necessary Systems biology integrates multiple omics data modeling and cell activity prediction to gain a holistic understanding of biological processes By considering the whole system and its interactions rather than isolated components researchers can develop predictive models and even re engineer cells In the context of cereal improvement systems biology can play a crucial role in identifying and introducing desirable traits such as yield quality and stress tolerance It may help researchers uncover the molecular underpinnings of complex traits and offer insights for enhancing cereals on a national and international scale The book explores available omics resources the integration of multi omics data

and systems biology methods focusing on their applications in cereals breeding and research It highlights current and innovative strategies to understand complex traits improve yield and enhance resistance to biotic and abiotic stresses It also addresses the challenges and opportunities associated with modeling multi omics data and analyzing systems level information By leveraging systems biology and integrated omics research this book aims to redefine the future research agenda for cereal improvement

Proteomics in Domestic Animals: from Farm to Systems Biology Andre Martinho de Almeida,David Eckersall,Ingrid Miller,2018-02-01 Proteomics like other post genomics tools has been growing at a rapid pace and has important applications in numerous fields of science While its use in animal and veterinary sciences is still limited there have been considerable advances in this field in recent years in areas as diverse as physiology nutrition and food of animal origin processing This is mainly as a consequence of a wider availability and better understanding of proteomics methodologies by animal and veterinary researchers This book provides a comprehensive state of the art account of the status of farm animal proteomics research focusing on the principles behind proteomics methodologies and its specific applications and offering clear example
