Pseudo-Differential Operators and Symmetries Michael V. Ruzhansky, Ville Turunen, 2010-05-06 This monograph is devoted to the development of the theory of pseudo differential operators on spaces with symmetries Such spaces are the Euclidean space $\mathbb{R}^n$ the n torus T^n compact Lie groups and compact homogeneous spaces The book consists of several parts One of our aims has been not only to present new results on pseudo differential operators but also to show parallels between different approaches to pseudo differential operators on different spaces Moreover we tried to present the material in a self contained way to make it accessible for readers approaching the material for the first time However different spaces on which we develop the theory of pseudo differential operators require different backgrounds Thus while operators on the Euclidean space in Chapter 2 rely on the well known Euclidean Fourier analysis pseudo differential operators on the torus and more general Lie groups in Chapters 4 and 10 require certain backgrounds in discrete analysis and in the representation theory of compact Lie groups which we therefore present in Chapter 3 and in Part III respectively Moreover anyone who wishes to work with pseudo differential operators on Lie groups will certainly benefit from a good grasp of certain aspects of representation theory That is why we present the main elements of this theory in Part III thus eliminating the necessity for the reader to consult other sources for most of the time Similarly the backgrounds for the theory of pseudo differential operators on S^1 and $SU(2)$ developed in Chapter 12 can be found in Chapter 11 presented in a self contained way suitable for immediate use

Pseudo-Differential Operators and Related Topics Vishvesh Kumar, David

Rottensteiner, Michael Ruzhansky, 2025-01-28 The current volume gives an update on recent developments in the theory of pseudo differential operators and related topics The results collected here were presented at the Pseudo Differential Operators and Related Topics PSORT 2024 Conference at Ghent University Belgium and cover a wide range of topics in pseudo differential operators microlocal analysis time frequency analysis and related applications

Time-Frequency

Analysis of Operators Elena Cordero, Luigi Rodino, 2020-09-21 This authoritative text studies pseudodifferential and Fourier integral operators in the framework of time frequency analysis providing an elementary approach along with applications to almost diagonalization of such operators and to the sparsity of their Gabor representations Moreover Gabor frames and modulation spaces are employed to study dispersive equations such as the Schrödinger wave and heat equations and related Strichartz problems The first part of the book is addressed to non experts presenting the basics of time frequency analysis short time Fourier transform Wigner distribution and other representations function spaces and frames theory and it can be read independently as a short text book on this topic from graduate and under graduate students or scholars in other disciplines

Fourier Analysis

Michael Ruzhansky, Ville Turunen, 2014-01-18 This book is devoted to the broad field of Fourier analysis and its applications to several areas of mathematics including problems in the theory of pseudo differential operators partial differential equations and time frequency analysis It is based on lectures given at the international conference Fourier Analysis and Pseudo Differential Operators June 25-30 2012 at Aalto University Finland This collection of 20 refereed articles is based on selected talks and presents the latest advances in the field The conference was a satellite

meeting of the 6th European Congress of Mathematics which took place in Krakow in July 2012 it was also the 6th meeting in the series Fourier Analysis and Partial Differential Equations *Harmonic Analysis and Partial Differential Equations*

Michael Ruzhansky, Jens Wirth, 2023-03-06 This book collects papers related to the session Harmonic Analysis and Partial Differential Equations held at the 13th International ISAAC Congress in Ghent and provides an overview on recent trends and advances in the interplay between harmonic analysis and partial differential equations The book can serve as useful source of information for mathematicians scientists and engineers The volume contains contributions of authors from a variety of countries on a wide range of active research areas covering different aspects of partial differential equations interacting with harmonic analysis and provides a state of the art overview over ongoing research in the field It shows original research in full detail allowing researchers as well as students to grasp new aspects and broaden their understanding of the area **A Gentle Invitation to the Fractional World** Nicola Abatangelo, Serena Dipierro, Enrico

Valdinoci, 2025-10-27 The book focuses on the basic theory of nonlocal and fractional operators and it is divided into two main parts covering respectively the basic theory of the singular integral fractional Laplacian operator which also includes a number of explicit examples of its evaluations and the regularity theory in L^p spaces by going through Bessel and Besov spaces A number of appendices then go over additional material in order to make the exposition as self contained as possible The book is suitable for a PhD course but can be also read by advanced undergraduates It contains didactic elements but it is also useful for researchers since it collects essential material in a concise and self constrained way Advances in Harmonic

Analysis and Partial Differential Equations Vladimir Georgiev, Tohru Ozawa, Michael Ruzhansky, Jens Wirth, 2020-11-07 This book originates from the session Harmonic Analysis and Partial Differential Equations held at the 12th ISAAC Congress in Aveiro and provides a quick overview over recent advances in partial differential equations with a particular focus on the interplay between tools from harmonic analysis functional inequalities and variational characterisations of solutions to particular non linear PDEs It can serve as a useful source of information to mathematicians scientists and engineers The volume contains contributions of authors from a variety of countries on a wide range of active research areas covering different aspects of partial differential equations interacting with harmonic analysis and provides a state of the art overview over ongoing research in the field It shows original research in full detail allowing researchers as well as students to grasp new aspects and broaden their understanding of the area Quantization on Nilpotent Lie Groups Veronique

Fischer, Michael Ruzhansky, 2016-03-08 This book presents a consistent development of the Kohn Nirenberg type global quantization theory in the setting of graded nilpotent Lie groups in terms of their representations It contains a detailed exposition of related background topics on homogeneous Lie groups nilpotent Lie groups and the analysis of Rockland operators on graded Lie groups together with their associated Sobolev spaces For the specific example of the Heisenberg group the theory is illustrated in detail In addition the book features a brief account of the corresponding quantization theory

in the setting of compact Lie groups The monograph is the winner of the 2014 Ferran Sunyer i Balaguer Prize
