Nonlinear Dimensionality Reduction Information Science And Statistics:

Nonlinear Dimensionality Reduction John A. Lee, Michel Verleysen, 2007-10-31 Methods of dimensionality reduction provide a way to understand and visualize the structure of complex data sets Traditional methods like principal component analysis and classical metric multidimensional scaling suffer from being based on linear models Until recently very few methods were able to reduce the data dimensionality in a nonlinear way However since the late nineties many new methods have been developed and nonlinear dimensionality reduction also called manifold learning has become a hot topic New advances that account for this rapid growth are e g the use of graphs to represent the manifold topology and the use of new metrics like the geodesic distance In addition new optimization schemes based on kernel techniques and spectral decomposition have lead to spectral embedding which encompasses many of the recently developed methods This book describes existing and advanced methods to reduce the dimensionality of numerical databases For each method the description starts from intuitive ideas develops the necessary mathematical details and ends by outlining the algorithmic implementation Methods are compared with each other with the help of different illustrative examples The purpose of the book is to summarize clear facts and ideas about well known methods as well as recent developments in the topic of nonlinear dimensionality reduction With this goal in mind methods are all described from a unifying point of view in order to highlight their respective strengths and shortcomings The book is primarily intended for statisticians computer scientists and data analysts It is also accessible to other practitioners having a basic background in statistics and or computational learning like psychologists in psychometry and economists *Data Science* Beiji Zou, Min Li, Hongzhi Wang, Xianhua Song, Wei Xie, Zeguang Lu, 2017-09-15 This two volume set CCIS 727 and 728 constitutes the refereed proceedings of the Third International Conference of Pioneering Computer Scientists Engineers and Educators ICPCSEE 2017 originally ICYCSEE held in Changsha China in September 2017 The 112 revised full papers presented in these two volumes were carefully reviewed and selected from 987 submissions The papers cover a wide range of topics related to Basic Theory and Techniques for Data Science including Mathematical Issues in Data Science Computational Theory for Data Science Big Data Management and Applications Data Quality and Data Preparation Evaluation and Measurement in Data Science Data Visualization Big Data Mining and Knowledge Management Infrastructure for Data Science Machine Learning for Data Science Data Security and Privacy Applications of Data Science Case Study of Data Science Multimedia Data Management and Analysis Data driven Scientific Research Data driven Bioinformatics Data driven Healthcare Data driven Management Data driven eGovernment Data driven Smart City Planet Data Marketing and Economics Social Media and Recommendation Systems Data driven Security Data driven Business Model Innovation Social and or organizational impacts of Data Science **Dimensionality Reduction in Data Science** Max Garzon, Ching-Chi Yang, Deepak Venugopal, Nirman Kumar, Kalidas Jana, Lih-Yuan Deng, 2022-07-28 This book provides a practical and fairly comprehensive review of Data Science through the

lens of dimensionality reduction as well as hands on techniques to tackle problems with data collected in the real world State of the art results and solutions from statistics computer science and mathematics are explained from the point of view of a practitioner in any domain science such as biology cyber security chemistry sports science and many others Quantitative and qualitative assessment methods are described to implement and validate the solutions back in the real world where the problems originated The ability to generate gather and store volumes of data in the order of tera and exo bytes daily has far outpaced our ability to derive useful information with available computational resources for many domains This book focuses on data science and problem definition data cleansing feature selection and extraction statistical geometric information theoretic biomolecular and machine learning methods for dimensionality reduction of big datasets and problem solving as well as a comparative assessment of solutions in a real world setting This book targets professionals working within related fields with an undergraduate degree in any science area particularly quantitative Readers should be able to follow examples in this book that introduce each method or technique These motivating examples are followed by precise definitions of the technical concepts required and presentation of the results in general situations These concepts require a degree of abstraction that can be followed by re interpreting concepts like in the original example s Finally each section closes with solutions to the original problem s afforded by these techniques perhaps in various ways to compare and contrast disadvantages to other solutions

Software for Data Analysis

John Chambers,2008-06-14 John Chambers has been the principal designer of the S language since its beginning and in 1999 received the ACM System Software award for S the only statistical software to receive this award He is author or coauthor of the landmark books on S Now he turns to R the enormously successful open source system based on the S language R s international support and the thousands of packages and other contributions have made it the standard for statistical computing in research and teaching This book guides the reader through programming with R beginning with simple interactive use and progressing by gradual stages starting with simple functions More advanced programming techniques can be added as needed allowing users to grow into software contributors benefiting their careers and the community R packages provide a powerful mechanism for contributions to be organized and communicated The techniques covered include such modern programming enhancements as classes and methods namespaces and interfaces to spreadsheets or data bases as well as computations for data visualization numerical methods and the use of text data
