Nonlinear Functional Analysis and Its Applications Eberhard Zeidler, 1986 **Nonlinear Functional Analysis and Its Applications: Fixed-Point theorems** Eberhard Zeidler, 1986 *Nonlinear Functional Analysis and Its Applications* E. Zeidler, 1989-12-11 This is the second of a five volume exposition of the main principles of nonlinear functional analysis and its applications to the natural sciences economics and numerical analysis The presentation is self contained and accessible to the nonspecialist Part II concerns the theory of monotone operators It is divided into two subvolumes II A and II B which form a unit The present Part II A is devoted to linear monotone operators It serves as an elementary introduction to the modern functional analytic treatment of variational problems integral equations and partial differential equations of elliptic parabolic and hyperbolic type This book also represents an introduction to numerical functional analysis with applications to the Ritz method along with the method of finite elements the Galerkin methods and the difference method Many exercises complement the text The theory of monotone operators is closely related to Hilbert's rigorous justification of the Dirichlet principle and to the 19th and 20th problems of Hilbert which he formulated in his famous Paris lecture in 1900 and which strongly influenced the development of analysis in the twentieth century **Nonlinear Functional Analysis and its Applications** Eberhard Zeidler, 1998-11-06 The greatest mathematicians such as Archimedes Newton and Gauss always united theory and applications in equal measure Felix Klein There exists the remarkable possibility that one can master a subject mathematically without really understanding its essence Albert Einstein Don't give us numbers give us insight A contemporary natural scientist to a mathematician Numerous questions in physics chemistry biology and economics lead to nonlinear problems for example deformation of rods plates and shells behavior of plastic materials surface waves of fluids flows around objects in fluids or gases shock waves in gases movement of viscous fluids equilibrium forms of rotating fluids in astrophysics determination of the shape of the earth through gravitational measurements behavior of magnetic fields of astrophysical objects melting processes chemical reactions heat radiation processes in nuclear reactors nonlinear oscillation in physics chemistry and biology 2 Introduction existence and stability of periodic and quasiperiodic orbits in celestial mechanics stability of physical chemical biological ecological and economic processes diffusion processes in physics chemistry and biology processes with entropy production and self organization of systems in physics chemistry and biology study of the electrical potential variation in the heart through measurements on the body surface to prevent heart attacks determining material constants or material laws e.g. *Nonlinear Functional Analysis; Fixed Point Theory and Its Applications* [?], 2000-11 **Nonlinear Functional Analysis and its Applications** E. Zeidler, 2013-12-18 As long as a branch of knowledge offers an abundance of problems it is full of vitality David Hilbert Over the last 15 years I have given lectures on a variety of problems in nonlinear functional analysis and its applications In doing this I have recommended to my students a number of excellent monographs devoted to specialized topics but there was no complete survey type exposition of

nonlinear functional analysis making available a quick survey to the wide range of readers including mathematicians natural scientists and engineers who have only an elementary knowledge of linear functional analysis I have tried to close this gap with my five part lecture notes the first three parts of which have been published in the Teubner Texte series by Teubner Verlag Leipzig 1976 1977 and 1978 The present English edition was translated from a completely rewritten manuscript which is significantly longer than the original version in the Teubner Texte series The material is organized in the following way Part I Fixed Point Theorems Part II Monotone Operators Part III Variational Methods and Optimization Parts IV jV Applications to Mathematical Physics The exposition is guided by the following considerations a What are the supporting basic ideas and what intrinsic interrelations exist between them 3 In what relation do the basic ideas stand to the known propositions of classical analysis and linear functional analysis y What typical applications are there VII Preface viii Special emphasis is placed on motivation

Nonlinear Functional Analysis and Its Applications Eberhard Zeidler, 1986 The fourth of a five volume exposition of the main principles of nonlinear functional analysis and its applications to the natural sciences economics and numerical analysis The presentation is self contained and accessible to the non specialist and topics covered include applications to mechanics elasticity plasticity hydrodynamics thermodynamics statistical physics and special and general relativity including cosmology The book contains a detailed physical motivation of the relevant basic equations and a discussion of particular problems which have played a significant role in the development of physics and through which important mathematical and physical insight may be gained It combines classical and modern ideas to build a bridge between the language and thoughts of physicists and mathematicians Many exercises and a comprehensive bibliography complement the text

Nonlinear Functional Analysis and Its Applications Radu Precup, 2021-04-14 This book consists of nine papers covering a number of basic ideas concepts and methods of nonlinear analysis as well as some current research problems Thus the reader is introduced to the fascinating theory around Brouwer s fixed point theorem to Granas theory of topological transversality and to some advanced techniques of critical point theory and fixed point theory Other topics include discontinuous differential equations new results of metric fixed point theory robust tracker design problems for various classes of nonlinear systems and periodic solutions in computer virus propagation models
