Nonlinear Magnetization Dynamics in Nanosystems Isaak D. Mayergoyz, Giorgio Bertotti, Claudio Serpico, 2009-04-20 As data transfer rates increase within the magnetic recording industry improvements in device performance and reliability crucially depend on the thorough understanding of nonlinear magnetization dynamics at a sub nanoscale level This book offers a modern stimulating approach to the subject of nonlinear magnetization dynamics by discussing important aspects such as the Landau Lifshitz Gilbert LLG equation analytical solutions and the connection between the general topological and structural aspects of dynamics An advanced reference for the study and understanding of nonlinear magnetization dynamics it addresses situations such as the understanding of spin dynamics in short time scales and device performance and reliability in magnetic recording Topics covered include nonlinear magnetization dynamics and the Landau Lifshitz Gilbert equation nonlinear dynamical systems spin waves ferromagnetic resonance and pulsed magnetization switching The book explains how to derive exact analytical solutions for the complete nonlinear problem and emphasises the connection between the general topological and structural aspects of nonlinear magnetization dynamics and the discretization schemes better suited to its numerical study It is an exceptional research tool providing an advanced understanding of the study of magnetization dynamics in situations of fundamental and technological interest Spintronics in Nanoscale Devices Eric R. Hedin, Yong S. Joe, 2016-04-19 By exploiting the novel properties of quantum dots and nanoscale Aharonov Bohm rings together with the electronic and magnetic properties of various semiconductor materials and graphene researchers have conducted numerous theoretical and computational modeling studies and experimental tests that show promising behavior for spintronics applications *Nonlinear Magnetization Dynamics in Nanosystems* Snoman, 2008 As data transfer rates increase within the magnetic recording industry improvements in device performance and reliability crucially depend on the thorough understanding of nonlinear magnetization dynamics at a sub nanoscale level Linear and Nonlinear Magnetization Dynamics in Thin Ferromagnetic Films and Nanostructures ,2014 Magnetism Joachim Stöhr, Hans Christoph Siegmann, 2007-01-19 This text book gives a comprehensive account of magnetism one of the oldest yet most vibrant fields of physics It spans the historical development the physical foundations and the continuing research underlying the subject The book covers both the classical and quantum mechanical aspects of magnetism and novel experimental techniques Perhaps uniquely it discusses spin transport and magnetization dynamics phenomena associated with atomically and spin engineered nano structures against the backdrop of spintronics and magnetic storage and memory applications The book is for students and serves as a reference for scientists in academia and research laboratories *Handbook of Nanomagnetism* Rosa A. Lukaszew, 2015-10-06 This unique handbook compiles and details cutting edge research in nanomagnetism and its applications in spintronics magnetoplasmonics and nonlinear magneto optics Fundamental aspects of magnetism relevant to nanodevices and new spin transfer torque random access memory STT RAM

current induced domain wall motion memory and spin torque oscillations. *Magnetism of Surfaces, Interfaces, and Nanoscale Materials* Robert E. Camley, Zbigniew Celinski, Robert L. Stamps, 2015-10-27 In the past 30 years magnetic research has been dominated by the question of how surfaces and interfaces influence the magnetic and transport properties of nanostructures thin films and multilayers The research has been particularly important in the magnetic recording industry where the giant magnetoresistance effect led to a new generation of storage devices including hand held memories such as those found in the ipod More recently transfer of spin angular momentum across interfaces has opened a new field for high frequency applications This book gives a comprehensive view of research at the forefront of these fields The frontier is expanding through dynamic exchange between theory and experiment Contributions have been chosen to reflect this giving the reader a unified overview of the topic Addresses both theory and experiment that are vital for gaining an essential understanding of topics at the interface between magnetism and materials science Chapters written by experts provide great insights into complex material Discusses fundamental background material and state of the art applications serving as an indispensable guide for students and professionals at all levels of expertise Stresses interdisciplinary aspects of the field including physics chemistry nanocharacterization and materials science Combines basic materials with applications thus widening the scope of the book and its readership *Nonlinear Magnetization Dynamics in Materials for High-frequency Applications* Roberto Bonin, 2006 *Investigation of Magnetization Dynamics in Nanostructures* [?], 2015 **Nonlinear Magnetization Dynamics Under Influence of Oscillating Field** Ryan Keelty Smith, 2007
