Optimization for Process Systems Engineering Ignacio E. Grossmann, 2021-03-25 Based on the author's forty years of teaching experience this unique textbook covers both basic and advanced concepts of optimization theory and methods for process systems engineers Topics covered include continuous discrete and logic optimization linear nonlinear mixed integer and generalized disjunctive programming optimization under uncertainty stochastic programming and flexibility analysis and decomposition techniques Lagrangean and Benders decomposition Assuming only a basic background in calculus and linear algebra it enables easy understanding of mathematical reasoning and numerous examples throughout illustrate key concepts and algorithms End of chapter exercises involving theoretical derivations and small numerical problems as well as in modeling systems like GAMS enhance understanding and help put knowledge into practice Accompanied by two appendices containing web links to modeling systems and models related to applications in PSE this is an essential text for single semester graduate courses in process systems engineering in departments of chemical engineering [Optimal Control Problems Arising in Mathematical Economics](#) Alexander J. Zaslavski, 2022-06-28 This book is devoted to the study of two large classes of discrete time optimal control problems arising in mathematical economics Nonautonomous optimal control

problems of the first class are determined by a sequence of objective functions and sequence of constraint maps They correspond to a general model of economic growth We are interested in turnpike properties of approximate solutions and in the stability of the turnpike phenomenon under small perturbations of objective functions and constraint maps The second class of autonomous optimal control problems corresponds to another general class of models of economic dynamics which includes the Robinson Solow Srinivasan model as a particular case In Chap 1 we discuss turnpike properties for a large class of discrete time optimal control problems studied in the literature and for the Robinson Solow Srinivasan model In Chap 2 we introduce the first class of optimal control problems and study its turnpike property This class of problems is also discussed in Chaps 3 6 In Chap 3 we study the stability of the turnpike phenomenon under small perturbations of the objective functions Analogous results for problems with discounting are considered in Chap 4 In Chap 5 we study the stability of the turnpike phenomenon under small perturbations of the objective functions and the constraint maps Analogous results for problems with discounting are established in Chap 6 The results of Chaps 5 and 6 are new The second class of problems is studied in Chaps 7 9 In Chap 7 we study the turnpike properties The stability of the turnpike phenomenon under small perturbations of the objective functions is established in Chap 8 In Chap 9 we establish the stability of the turnpike phenomenon under small perturbations of the objective functions and the constraint maps The results of Chaps 8 and 9 are new In Chap 10 we study optimal control problems related to a model of knowledge based endogenous economic growth and show the existence of trajectories of unbounded economic growth and provide estimates for the growth rate
