Agronomic Crops Mirza Hasanuzzaman, 2019-11-23 Agronomic crops have provided food beverages fodder fuel medicine and industrial raw materials since the beginning of human civilization More recently agronomic crops have been cultivated using scientific rather than traditional methods However in the current era of climate change agronomic crops are suffering from different environmental stresses that result in substantial yield loss To meet the food demands of the ever increasing global population new technologies and management practices are being adopted to boost yields and maintain productivity under both normal and adverse conditions Further in the context of sustainable agronomic crop production scientists are adopting new approaches such as varietal development soil management nutrient and water management and pest management Researchers have also made

remarkable advances in developing stress tolerance in crops However the search for appropriate solutions for optimal production to meet the increasing food demand is still ongoing Although there are several publications on the recent advances in these areas there are few comprehensive resources available covering all of the recent topics This timely book examines all aspects of production technologies management practices and stress tolerance of agronomic crops *Organic Farming* Sarath Chandran,Unni M.R.,Sabu Thomas,Dharmendra Kumar Meena,2023-07-04 *Organic Farming Global Perspectives and Methods* Second Edition provides the core definition and concepts of organic farming also addressing current challenges and goals The book provides a comprehensive resource from sustainability to influences on the ecosystem including the significance of seed soil water and weed management and other important aspects In addition it presents advancements in the field and insights on the future This fully revised and updated edition expands coverage to include important economic considerations understanding the influence of nanotechnology on organic farming vertical farming organic farming and livestock management as well as the future of organic farming Written by a team of global experts to provide current concepts of organic farming this resource is valuable for researchers graduate students and post doctoral fellows from academia and research institutions Presents the latest insights from basic principles to emerging practices and future prospects Includes new chapters on emerging organic farming practices and opportunities to address animal agriculture and vertical and indoor farming Includes coverage of standards certification and accreditation and presents insights on economics and marketing *Weed Research* Paul E. Agroecological Management of Weeds - Minimizing Chemical Herbicides in Arable Cropping Bärbel Gerowitt,Rick Llewellyn,Carol Mallory-Smith ,Elba De La Fuente,2024-09-19 Weeds have a strong impact on arable production causing yield quantity and quality losses Adequately controlling them is fundamental in arable cropping However weeds develop strategies to survive control For decades the dominating method to manage weeds was the use of chemical herbicides Weeds becoming resistant against these chemical herbicides is an obvious and global reaction together with undesired environmental consequences this creates increasing pressure to overcome chemical herbicide use Therefore foreseeing weed management demands exploiting and evaluating novel methods to replace them Since each single method will probably be less effective than chemical herbicides systematic integration and upscaling on levels like fields farms cropping systems landscapes and socio economics is required in research Agro ecological management of weeds stands for this ambition
