Wulfhorst, 2013-07-02 Enhancing Communication Collaboration in Interdisciplinary Research edited by Michael O'Rourke Stephen Crowley Sanford D Eigenbrode and J D Wulfhorst is a volume of previously unpublished state of the art chapters on interdisciplinary communication and collaboration written by leading figures and promising junior scholars in the world of interdisciplinary research education and administration Designed to inform both teaching and research this innovative book covers the spectrum of interdisciplinary activity offering a timely emphasis on collaborative interdisciplinary work The book's four main parts focus on theoretical perspectives case studies communication tools and institutional perspectives while a final chapter ties together the various strands that emerge in the book and defines trend lines and future research questions for those conducting work on interdisciplinary communication

Structural Human Ecology Nadine Bratchatzek, Paul Ehrlich, Sylvia Hiller, Roger E. Kasperson, Sandra T. Marquart-Pyatt, Allan Mazur, Ortwin Renn, Dirk Scheer, 2021-09-24 The desire to understand people's influence on ecosystems has inspired scientific studies and analyses of the stress individuals and communities place on the environment human well being and the tradeoffs between them As an emerging discipline Structural Human Ecology is devoted to unlocking the dynamic links between population environment social organization and technology The new field offers cutting edge research in risk analysis that can be used to evaluate environmental policies and thus help citizens and societies worldwide learn how to most effectively mitigate human impacts on the biosphere The essays in this volume were presented by leading international scholars at a 2011 symposium honoring the late Dr Eugene Rosa then Boeing Distinguished Professor of Environmental Sociology at WSU

Climate Change and Society Riley E. Dunlap, Robert J. Brulle, 2015 Climate change is one of today's most important issues presenting an intellectual challenge to the natural and social sciences While there has been progress in natural science understanding of climate change social science research has not been as fully developed This collection of essays breaks new theoretical and empirical ground by

presenting climate change as a thoroughly social phenomenon embedded in our institutions and cultural practices

Applied Multivariate Research Lawrence S. Meyers, Glenn Gamst, A.J. Guarino, 2013 For me the comprehensive nature of the text is most important even when I don't cover topics in class students gain value by being able to read about cluster analysis or ROC analysis in enough detail that they can conduct their own analyses Students appreciate the integration with SPSS There is an appropriate balance of practice and background so that students learn what they need to know about the techniques but also learn how to implement and interpret the analysis [QASS 2012 Top Up Package](#) SAGE PUBNS, 2013-03-18 We offer these texts bundled together at a discount for your students Harry J Khamis The Association Graph and the Multigraph for Loglinear Models Volume 167 This practical guide teaches nonstatisticians how to analyze and interpret loglinear models using the multigraph The Association Graph and the Multigraph for Loglinear Models will help students particularly those studying the analysis of categorical data to develop the ability to evaluate and unravel even the most complex loglinear models without heavy calculations or statistical software This supplemental text reviews loglinear models explains the association graph and introduces the multigraph to students who may have little prior experience of graphical techniques but have some familiarity with categorical variable modeling The author presents logical step by step techniques from the point of view of the practitioner focusing on how the technique is applied to contingency table data and how the results are interpreted Pamela Paxton John R Hipp Sandra Marquart Pyatt Nonrecursive Models Endogeneity Reciprocal Relationships and Feedback Loops Volume 168 Nonrecursive Models is a clear and concise introduction to the estimation and assessment of nonrecursive simultaneous equation models This unique monograph gives practical advice on the specification and identification of simultaneous equation models how to assess the quality of the estimates and how to correctly interpret results Wijbrandt H van Schuur Ordinal Item Response Theory Mokken Scale Analysis Volume 169 Measurement in the social sciences often refers to standardized answers to close ended questions in which answers are analyzed as if they were measurements on an interval scale This volume presents a measurement model that maintains the ordinal aspects of the data in order to establish how well the model fits and how it measures subjects and items It relaxes the most stringent assumptions from parametric item response theory while maintaining its advantages over classical measurement methods such as reliability and factor analysis This volume is less technical than other books on the topic and is ideal for introductory courses in social science measurement Richard F Haase Multivariate General Linear Models Volume 170 This book provides an integrated introduction to multivariate multiple regression analysis MMR and multivariate analysis of variance MANOVA Beginning with an overview of the univariate general linear model this volume defines the key steps in analyzing linear model data and introduces multivariate linear model analysis as a generalization of the univariate model Richard F Haase focuses on multivariate measures of association for four common multivariate test statistics presents a flexible method for testing hypotheses on models and emphasizes the multivariate procedures attributable to Wilks Pillai

Hotelling and Roy The volume concludes with a discussion of canonical correlation analysis that is shown to subsume all the multivariate procedures discussed in previous chapters The analyses are illustrated throughout the text with three running examples drawing from several disciplines including personnel psychology anthropology environmental epidemiology and neuropsychology Valentim R Alferes Methods of Randomization in Experimental Design Volume 171 This book presents the main procedures of random assignment and local control in between subjects experimental designs and the counterbalancing schemes in within subjects or cross over experimental designs Alferes uses a pedagogical strategy that allows the reader to implement all randomization methods by relying on the materials given in the appendices and using common features included in most word processor software A companion website at www.sagepub.com/alferes provides downloadable IBM SPSS and R versions of SCRAED a package that performs simple and complex random assignment in experimental design including the 18 randomization methods presented in Chapters 2 and 3
