Nonresponse In Social Science Surveys A Research Agenda:

Nonresponse in Social Science Surveys National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on a Research Agenda for the Future of Social Science Data Collection, 2013-10-26 For many household surveys in the United States response rates have been steadily declining for at least the past two decades A similar decline in survey response can be observed in all wealthy countries Efforts to raise response rates have used such strategies as monetary incentives or repeated attempts to contact sample members and obtain completed interviews but these strategies increase the costs of surveys This review addresses the core issues regarding survey nonresponse It considers why response rates are declining and what that means for the accuracy of survey results These trends are of particular concern for the social science community which is heavily invested in obtaining information from household surveys The evidence to date makes it apparent that current trends in nonresponse if not arrested threaten to undermine the potential of household surveys to elicit information that assists in understanding social and economic issues The trends also threaten to weaken the validity of inferences drawn from estimates based on those surveys High nonresponse rates create the potential or risk for bias in estimates and affect survey design data collection estimation and analysis The survey community is painfully aware of these trends and has responded aggressively to these threats The interview modes employed by surveys in the public and private sectors have proliferated as new technologies and methods have emerged and matured To the traditional trio of mail telephone and face to face surveys have been added interactive voice response IVR audio computer assisted self interviewing ACASI web surveys and a number of hybrid methods Similarly a growing research agenda has emerged in the past decade or so focused on seeking solutions to various aspects of the problem of survey nonresponse the potential solutions that have been considered range from better training and deployment of interviewers to more use of incentives better use of the information collected in the data collection and increased use of auxiliary information from other sources in survey design and data collection *Nonresponse in Social Science Surveys* Thomas J. Plewes, 2013 Similarly a growing research agenda has emerged in the past decade or so focused on seeking solutions to various aspects of the problem of survey nonresponse the potential solutions that have been considered range from better training and deployment of interviewers to more use of incentives better use of the information collected in the data collection and increased use of auxiliary information from other sources in survey design and data collection *Nonresponse in Social Science Surveys A Research Agenda* also documents the increased use of information collected in the survey process in nonresponse adjustment Publisher's description **Polling at a Crossroads** Michael A. Bailey, 2024-03-07 Polling at a Crossroads presents an intuitive paradigm that allows us to understand and confront the challenges facing modern polling *Global Perspectives on Quality Assurance and Accreditation in Higher Education*
