Numerical Methods for Roots of Polynomials - Part II J.M. McNamee,V.Y. Pan,2013-07-19 First we consider the Jenkins Traub 3 stage algorithm In stage 1 we defineIn the second stage the factor is replaced by for fixed and in the third stage by where is re computed at each iteration Then a root A slightly different algorithm is given for real polynomials Another class of methods uses minimization i e we try to find such that is a minimum where At this minimum we must have i e Several authors search along the coordinate axes or at various angles with them while others move along the negative gradient which is probably more efficient Some use a hybrid of Newton and minimization Finally we come to Lin and Bairstow s methods which divide the polynomial by a quadratic and iteratively reduce the remainder to 0 This enables us to find pairs of complex roots using only real arithmetic Prentice Hall Algebra 2 Prentice-Hall Staff,2004-10-15 Prentice Hall Mathematics offers comprehensive math content coverage introduces basic mathematics concepts and skills and provides numerous opportunities to access basic skills along with abundant remediation and intervention activities Prentice Hall New York Math: Math B ,2001

Polynomial and Matrix Computations Dario Bini,Victor Y. Pan,2012-12-06 Our Subjects and Objectives This book is about algebraic and symbolic computation and numerical computing with matrices and polynomials It greatly extends the study of these topics presented in the celebrated books of the seventies AHU and BM these topics have been under represented in CLR which is a highly successful extension and updating of AHU otherwise Compared to AHU and BM our volume adds extensive material on parallel com putations with general matrices and polynomials on the bit complexity of arithmetic computations including some recent techniques of data compres sion and the study of numerical approximation properties of polynomial and matrix algorithms and on computations with Toeplitz matrices and other dense structured matrices The latter subject should attract people working in numerous areas of application in particular coding

signal processing control algebraic computing and partial differential equations The authors teaching experience at the Graduate Center of the City University of New York and at the University of Pisa suggests that the book may serve as a text for advanced graduate students in mathematics and computer science who have some knowledge of algorithm design and wish to enter the exciting area of algebraic and numerical computing The potential readership may also include algorithm and software designers and researchers specializing in the design and analysis of algorithms computational complexity algebraic and symbolic computing and numerical computation
