microRNA Regulation in Health and Disease Clifford J. Steer, Subbaya Subramanian, 2020-02-21 MicroRNAs (miRNAs) are small regulatory RNAs that play a crucial role in posttranscriptional gene regulation. Over two thousand miRNAs have been identified in humans and many of them are conserved in other species. miRNAs are implicated in fundamental cellular functions including development and disease. In the last decade there has been an overwhelming amount of data contributing to the understanding of miRNA biogenesis and their target genes. Moreover, a significant amount of work has been carried out in developing miRNA biomarkers and therapeutics for various disease conditions. RNA based markers and therapeutics have been proven to have a clinical impact and many of these miRNA based therapies are at various stages of human clinical trials and clinical applications. Notably, miRNAs are also found in exosomes and are considered to impart intercellular communication and function via several different modalities including tunneling nanotubes. In spite of our understanding of miRNA biology and function, there are many challenges in effectively using miRNAs as biomarkers and therapeutic agents in clinical applications. In this Special Issue, we are inviting reviews, perspectives, and original research articles to address some of these challenges. Topics will include but are not limited to miRNA biogenesis, clinical applications, extracellular function, biomarkers, miRNA immune regulation, signaling pathways, and preclinical models.

Encyclopedia of Biomedical Gerontology, 2019-11-20 Encyclopedia of Biomedical Gerontology Three Volume Set presents a wide range of topics ranging from what happens in the body during aging, the reasons and mechanisms relating to those age related changes, and their clinical, psychological, and social modulators and determinants. The book covers the biological and medical aspects of gerontology within the general framework of the biological basis of assessing age, biological mechanisms of aging, age related changes in biological systems, human age related diseases, the biomedical practicality and impracticality of interventions, and finally the ethics of intervention. Provides a one stop resource to information written by world leading scholars in the field of biomedical gerontology. Fills a critical gap of information in a field that has seen significant progress in the last 10 years.

MicroRNA Targeted Cancer Therapy Fazlul H. Sarkar, 2014-04-22 Since the discovery of microRNAs (miRNAs) some twenty years ago by Victor Ambros, David Baulcombe, and Gary Ruvkun, these three scientists worked to uncover the mystery of miRNA, the small segments of nucleotides that silence genes. While studying the development of the nematode worm, Ambros and Ruvkun discovered miRNA in animals, while Baulcombe discovered it in plants. Since their discovery, it took more than two decades to fully appreciate the value of miRNA in human health and diseases. Emerging evidence suggests that the activation of oncogenes and/or the inactivation of tumor suppressor genes contribute to the development and progression of tumors. The regulation of genes is by far controlled by many transcription factors which are often deregulated during the development and progression of cancer. In addition, emerging evidence clearly suggests that the deregulation of miRNAs or small non coding RNAs could also regulate the expression of genes and likewise miRNA genes are also regulated by transcription.

factors The most attractive feature of miRNAs is that one miRNA can regulate many target genes mRNAs and thus miRNA targeted therapy is highly promising because multiple genes could be regulated by targeting a single miRNA which becomes very important for the killing of highly heterogeneous populations of cancer cells within a tumor mass Therefore miRNA targeted therapy is an attractive attribute of miRNA research which is covered through eighteen chapters compiled in this book MicroRNA targeted Cancer therapy and it is hoped that the field of miRNA research will be appreciated through critical reading of these chapters on the cutting edge research on miRNAs *Year Book of Pathology and Laboratory Medicine 2013* Stephen S. Raab, 2013-12-28 The Year Book of Pathology and Laboratory Medicine brings you abstracts of the articles that reported the year's breakthrough developments in pathology and laboratory medicine carefully selected from more than 300 journals worldwide Expert commentaries evaluate the clinical importance of each article and discuss its application to your practice There's no faster or easier way to stay informed Chapters in this annual cover the most current information on all aspects of pathology and laboratory medicine including molecular diagnostics dermatopathology anatomic pathology techniques outcomes analysis cytopathology clinical immunology clinical microbiology neuropathology and hematology
