**Micro System Technologies 90** Herbert Reichl, 2012-12-06 On September 10 13 1990 the first international meeting on Microsystem Technologies takes place at the Berlin International Congress Center Most of the traditional congresses deal with themes that become more and more specific and only a small part of the scientific world is reflected The Micro System Technologies is attempting to take the opposite direction During the last two decades the development of microelectronics was characterized by a tremendous increase of complexity of integrated circuits At the same time the fields of microoptics and micromechanics have been developed to an advanced state of the art by the application of thin film and semiconductor technologies The trend of the future development is to increase the integration density by combining the microelectronic microoptic and micro mechanic aspects to new complex multifunctional systems which are able to comprise sensors actuators analogue and digital circuits on the same chip or on multichip modules Microsystems will lead to extensions of the field of microelectronic applications with important technical alterations and can open new considerable markets For the realization of economical solutions for microsystems a lot of interdisciplinary cooperation and know how has to be developed New materials for sensitive layers substrates conducting semiconducting or isolating thin films are the basis for the development of new technologies The increasing complexity leads to increasing interaction among electrical and non electrical quantities

Addresses the need for peer-to-peer computing and grid paradigms in delivering efficient service-oriented computing. New Concepts in Pathology and Treatment of Autoimmune Disorders. C. Pozzilli, P. Pozzilli, J.-F. Kapp, 2013-06-29. Autoimmunity characterized by autoreactive lymphocytes and autoantibodies is the consequence of a failure to discriminate between self and non-self, and autoimmune diseases are an increasing threat to people living in the industrialized countries. Autoimmune disorders are treatable but not curable, and patients can face disability at later stages of the disease. Thus, there is a medical and economic need for new concepts and treatments in autoimmune disorders. New concepts and treatments can only be achieved by an interdisciplinary approach bringing together expertise, technologies, and clinical experience. The workshop focused on multiple sclerosis, rheumatoid arthritis, and type I diabetes, and discussed conventional drug therapies, gene therapy, cell and tissue transplantation therapies, and first treatments using blood stem cells for reprogramming the patient's immune system.
