Hutchison, David Held, Giseller Grabenweger, Giulia Torrini, Daniel A. Potter, 2025-03-14 Since the introduction of the Japanese beetle *Popillia japonica* Coleoptera Scarabaeidae to the United States in 1916 the pest has had a long history of range expansion and is now established in at least 28 states In 2014 *P japonica* was found for the first time in continental Europe with detections in northern Italy and subsequently southern Switzerland Most recently a population was confirmed near Vancouver British Columbia Canada Adult beetles are quite opportunistic and readily colonize and damage over 300 host plant species ranging from field crops maize soybean to horticultural crops wine grapes raspberry apple and ornamentals such as linden trees The larval grub stage actively feeds on root tissue of several turf species utilizing turf on golf courses residential lawns perennial meadows and potentially turf growing within the trellis rows of vineyards and orchards Thus urban as well as agricultural regions can harbor infestations facilitate spread and thus trigger substantial insecticidal sprays to suppress populations Because of the damage potential the beetle has been designated a quarantine pest in some regions e g California U S and EU countries In response to the risk to plant health in Europe a collaborative international research group IPM *Popillia* was created with the aim to coordinate and facilitate research activities among multiple countries Leaders from this group and

the U S will serve as Guest Editors to encourage timely publication of research to accelerate our understanding of *P japonica* biology and management One of the challenges to effective management of *P japonica* is that few if any soil applied or foliar insecticides labeled for larval and adult stages respectively are approved for use in some countries or are currently being reviewed by regulatory agencies This is particularly true in several EU countries As this pest continues to expand its range it is imperative to investigate alternatives to chemical control Moreover an improved understanding of *P japonica* biology behavior and ecology is necessary to develop a solid foundation for future pest management programs We believe this Research Topic will prove to be a valuable venue for publishing novel research on a variety of *P japonica* research priorities in the near future We look forward to new submissions in the topic areas highlighted below

Article types This Research Topic welcomes several types of articles including original research opinion perspective mini review and review articles that examine all aspects of *P japonica* invasion ecology and management Potential contributions include but are not limited to Early detection monitoring and spread rates of *P japonica* larval adult populations Invasion biology and population ecology Dispersal of *P japonica* human aided or natural and pathways of pest introduction Range expansion within the context of global climate change Behavioral studies chemical ecology of insect plant interactions Larval adult feeding injury measuring the impact on high value crops Novel integrated pest management IPM solutions with low environmental impact Natural antagonists and biological control agents and trophic interactions Synergies between biological control and pest resistant varieties Novel genetic genomics studies on *P japonica* or bacteria entomopathogenic fungi nematodes and other biological control agents Environmental and non target impacts of *P japonica* damage and IPM alternatives Economic assessment of *P japonica* invasions and IPM solutions We are also pleased to have Dr Daniel Potter University of Kentucky US serve in an honorary role as Topic Coordinator and offer advice to the project via his 43 years of experience and knowledge of *P japonica* biology and ecology
