Theoretical Nursing Afaf Ibrahim Meleis, 2011 An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice Because of these assumptions most of the early writing about theory development was about outlining strategies that should be used rather than strategies that have already been used in the discipline to develop theories Theorists themselves did not uncover or adequately discuss ways by which they developed their theories therefore the tendency was to describe processes that were based on theories developed in other disciplines mainly the physical and social sciences And an implicit assumption was made that there should be a single strategy for theory development some claiming to begin the process from practice and others believing it should be driven by research Provided by publisher Nursing Theories and Models Hugh P. McKenna, 1997 Nursing theory is a major part of all nursing courses and nurses are encouraged to use theories in practice but it is not always easy for the student to make a real connection between the two Drawing on many years experience of teaching and research Hugh McKenna addresses the theory needs of both students and qualified staff He demystifies the confusing terminology associated with nursing theory and shows how all nurses can build theory from practice through reflection and analysis This text offers step by step guidelines on how to analyse concepts how to generate and select theory how to apply and test theory in practice Written in a friendly easy to read style Nursing Theories and Models puts forward realistic strategies for bridging the theory practice gap *Middle Range Theories* Sandra J.
